

**Program Report- IOC Industry Oriented Course**

1	Name of the Activity/Event	Guest Lecture on Principles of Operating Systems		
2	Date of Activity/Event	21/07/2023		
3	Organized by/Name of the committee	Narayana Engineering College CSE Department		
4	Place of Activity/event	Sri Ramanujam Seminar Hall C Block		
5	Resource person/guest/organization	Mr.P.Basha, Asst Professor Dept of Data Science Mohan Babu University Tirupati		
6	Type of activity/Event	Guest Lecture		
7	Activity/Event objectives	1.		
8	Participation	Students	Faculty	Total Participation
		198	5	203
9	Suggested Improvements	Need some more sessions practical environment is suggested .		
10	Enclosures	Event Photos		
11	Signature of Incharge/convener			

Department of CSE has conducted a event as a part of curriculum Industry Oriented Course on Microsoft Azure 23/06/2023 and 24/06/2023. Microsoft Azure, often referred to as Azure, is a cloud computing platform run by Microsoft, which offers access, management, and development of applications and services through global data centers.

### *Resource Person delivering key concepts to the students*

Resource person explained about the key points of Microsoft Azure and virtualization process of Microsoft Azure.

**Key points discussed:**

### **Computer services on Microsoft Azure:**

WebJobs, are applications that can be deployed to an App Service environment to implement background processing that can be invoked on a schedule, on demand, or run continuously. The Blob, Table and Queue services can be used to communicate between WebApps, XYZ, iOS Software and WebJobs and to provide state.

### **Data management:**

- Azure Data Explorer provides big data analytics and data-exploration capabilities
- Azure Search provides text search and a subset of OData's structured filters using REST or SDK APIs.
- Cosmos DB is a NoSQL database service that implements a subset of the SQL SELECT statement on JSON documents.
- Azure Cache for Redis is a managed implementation of Redis.
- StorSimple manages storage tasks between on-premises devices and cloud storage.
- Azure SQL Database works to create, scale and extend applications into the cloud using Microsoft SQL Server technology. It also integrates with Active Directory, Microsoft System Center and Hadoop
- Azure Synapse Analytics is a fully managed cloud data warehouse.
- Azure Data Factory, is a data integration service that allows creation of data-driven workflows in the cloud for orchestrating and automating data movement and data transformation.
- Azure Data Lake is a scalable data storage and analytic service for big data analytics workloads that require developers to run massively parallel queries.
- Azure HDInsight is a big data relevant service, that deploys Hortonworks Hadoop on Microsoft Azure, and supports the creation of Hadoop clusters using Linux with Ubuntu.
- Azure Stream Analytics is a Serverless scalable event processing engine that enables users to develop and run real-time analytics on multiple streams of data from sources such as devices, sensors, web sites, social media, and other applications.

**Faculty Incharge**

**CSE- HOD**
