

**B.Tech – Electronics &  
Communication Engineering (E.C.E)  
Course Structure  
&  
SYLLABUS  
(2021-22 academic year)  
(NECR B.Tech 21)  
(w.e.f AY: 2021-22)**

**NARAYANA ENGINEERING COLLEGE::NELLORE**

**AUTONOMOUS**

## **INSTITUTE VISION & MISSION**

### **VISION**

- To be one of the nation's premier Institutions for Technical and Management Education and a key contributor for Technological and Socio-economic Development of the Nation.

### **MISSION**

- To produce technically competent Engineers and Managers by maintaining high academic standards, world class infrastructure and core instructions.
- To enhance innovative skills and multi disciplinary approach of students through well experienced faculty and industry interactions.
- To inculcate global perspective and attitude of students to face real world challenges by developing leadership qualities, lifelong learning abilities and ethical values.

**Department of E.C.E –**  
**(Electronics and Communication Engineering)**

**DEPARTMENT VISION & MISSION**

**VISION OF THE DEPARTMENT**

To produce technically competent and creative engineers who can cater to the industry and societal requirements in the field of Electronics & Communication Engineering.

**MISSION OF THE DEPARTMENT**

**M1.** To impart quality engineering education to students to enhance ability to pursue knowledge by providing core competency and state of the art infrastructure.

**M2.** To provide industry oriented learning for empowering and facilitating the learner through industry institute interaction and leadership qualities.

**M3.** To promote participation in research and extension activities for addressing the social needs by providing value based education along with life-long learning abilities.

## PEOs, POs, PSOs

### POs

- 1. Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- 2. Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- 3. Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- 4. Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- 5. Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- 6. The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

**7. Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

**8. Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

**9. Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

**10. Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

**11. Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

**12: Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

## PEOs

**PEO 1:** Attain professional excellence or gain higher degree to face challenges posed by industry and society

**PEO 2:** Address complex problems in a responsive and innovative manner.

**PEO 3:** Gain reputation by functioning effectively to address social and ethical responsibilities.

## PSOs

**PSO\_1: Domain Specific Knowledge:** Implement electronic systems related to Electronics Devices & Circuits, VLSI, Signal processing, Microcomputers, Embedded and Communication Systems to fulfill the solutions to real world challenges

**PSO\_2: Hardware Product Development:** Apply the software and hardware tools in Analog and Digital Electronic circuit design to address complex Electronics and Communication engineering problems.

### DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

### PROFESSIONAL ELECTIVE (PE)

The Professional Elective Courses (PE) are shown in different tracks/groups: The students will have options of selecting the electives from the different tracks/groups depending on the specialization one wishes to acquire.

| ELECTIVE TRACK/GROUP                 | Professional Elective-1                                 | Professional Elective-2                                | Professional Elective-3                       | Professional Elective-4                               | Professional Elective-5  |
|--------------------------------------|---|--|---|---|--|
| <b>Communications</b>                | An Introduction to coding theory (21EC4001)             | Antennas (21EC407)                                     | Satellite communication (21EC4013)            | Wireless communication (21EC4019)                     | Signal Processing for mm Wave Communication for 5G and Beyond (21EC4025) |
| <b>Micro Electronics</b>             | Industrial Electronics (21EC4002)                       | Micro Electronics (21EC4008)                           | Introduction to MEMS (21EC4014)               | Fundamentals of Nano and Quantum Photonics (21EC4020) | High Speed Electronics (21EC4026)  |
| <b>Signal &amp; Image Processing</b> | MATLAB Programming For Numerical Computation (21EC4003) | Adaptive Signal Processing (21EC4009)                  | Introduction to Machine Learning (21EC4015)   | Digital Image Processing (21EC4021)                   | Digital Speech Processing (21EC4027)                                     |
| <b>VLSI</b>                          | Fundamentals of Micro and Nano Fabrication (21EC4004)   | Mixed Signal Design (21EC4010)                         | RF Integrated Circuits (21EC4016)             | Low Power VLSI Design (21EC4022)                      | FPGA Architectures (21EC4028)  |
| <b>Embedded System</b>               | Semiconductor Memories (21EC4005)                       | Real Time Operating Systems (21EC4011)                 | Introduction to Internet of things (21EC4017) | Advanced Embedded Logic design (21EC4023)             | Embedded System Design with ARM (21EC4029)                               |
| <b>Automation</b>                    | Programmable Logic Controllers (21EC4006)               | Electronic Measurements and Instrumentation (21EC4012) | Biomedical Instrumentation (21EC4018)         | Virtual Instrumentation (21EC4024)                    | Process Control and Instrumentation (21EC4030)                           |
| <b>MOOCS</b>                         | MOOCS-1 (21EC4031)                                      | MOOCS-2 (21EC4032)                                     | MOOCS-3 (21EC4033)                            | MOOCS-4 (21EC4034)                                    | MOOCS-5 (21EC4035)   |

### HONORS

| COURSE CONTENT  |  |                           |
|---|--|---------------------------|
| <b>MODULE – 1</b>   | <b>Matrices</b>  | <b>Hours: 16h(12L+4T)</b> |
| Rank of a matrix by echelon form, normal form. Solving system of homogeneous and non-homogeneous linear equations. Eigen values and Eigenvectors and their properties (without proof), Cayley-Hamilton theorem (without proof), finding inverse and powers of a matrix by Cayley-Hamilton theorem, Diagonalization. |  |                           |
| At the end of the Module 1, student will be able to:  |  |                           |
| 1. Solving system of linear equations.  |  | (BL-3)                    |
| 2. Determine the rank, eigen values and eigenvectors.   |  | (BL-3)                    |
| 3. Find the inverse and powers of a square matrix by Cayley-Hamilton Theorem.   |  | (BL-1)                    |
| <b>MODULE -2</b>  | <b>Higher Order Ordinary Differential Equations with Constant Coefficients</b> | <b>Hours: 14h(11L+3T)</b> |

|  |   |                           |
|--|---|---------------------------|
| Definitions, homogenous and non-homogenous, Complimentary function, general solution, particular integral, method of variation of parameters. applications to L-C-R Circuits   |   |                           |
| At the end of the Module 2, students will be able to:  |   |                           |
| <ol style="list-style-type: none"> <li>1. Identify the essential characteristics of linear differential equations with constant coefficients. (BL-3)</li> <li>2. Solve the linear differential equations with constant coefficients by appropriate method. (BL-3)</li> <li>3. Classify and interpret the solutions of linear differential equations. (BL-2)</li> <li>4. Solve the higher order differential equation by analyzing physical situations. (BL-3)</li> </ol> |   |                           |
| <b>MODULE-3</b>  | <b>Mean Value Theorems and Multivariable Calculus</b> | <b>Hours: 12h (9L+3T)</b> |
| Taylor's and Maclaurin's theorems with remainders (without proof), related problems, Partial differentiation, Chain rule, Total derivative, Jacobians, maxima and minima of functions of two variables, method of Lagrange's multipliers.  |   |                           |
| At the end of the Module 3, students will be able to:  |   |                           |
| <ol style="list-style-type: none"> <li>1. Translate the given function as series of Taylor's and Maclaurin's with remainders. (BL-2)</li> <li>2. Find the maximum and minimum values of the function for two variables. (BL-1)</li> <li>3. Apply Jacobian concept to deal with problems in change of variables. (BL-3)</li> </ol>  |   |                           |
| <b>MODULE-4</b>  | <b>Partial Differential Equations</b>                 | <b>Hours: 10h (7L+3T)</b> |
| Introduction and formation of Partial Differential Equations by elimination of arbitrary constants and arbitrary functions, Solutions of first order linear partial differential equations using Lagrange's method, Solutions of first order non-linear partial differential equations- Standard forms-I, II, III and IV, Method of separation of variables.   |   |                           |
| At the end of the Module 4, students will be able to:  |   |                           |
| <ol style="list-style-type: none"> <li>1. Identify the basic properties of partial differential equations. (BL-3)</li> <li>2. Outline partial differential equations. (BL-2)</li> <li>3. Solve the applications of PDE by using the method of separation of variables. (BL-3)</li> <li>4. Apply the PDE techniques in various engineering fields. (BL-3)</li> </ol>  |   |                           |
| <b>MODULE-5</b>  | <b>Multiple Integrals</b>                             | <b>Hours: 12h(9L+3T)</b>  |
| Double integrals, change of order of integration, change of variables. Evaluation of Triple integrals, change of variables between Cartesian, Cylindrical and Spherical polar coordinates. Finding areas and volumes using double and triple integrals.  |   |                           |
| At the end of the Module 5, students will be able to:  |   |                           |
| <ol style="list-style-type: none"> <li>1. Find the area bounded by a region using double integration. (BL-1)</li> <li>2. Solve triple integrals. (BL-3)</li> <li>3. Make Use of multiple integral techniques in engineering problems. (BL-3)</li> </ol>  |   |                           |
| <b>Total hours</b>   |   | <b>64h (48L+16T)</b>      |

**Content beyond syllabus:**

1. L-U decomposition.
2. Deflection of Beams.
3. Taylor's series for function of two variables.
4. Homogeneous Linear Partial differential equations with constant coefficients.
5. Calculation of mass, Centre of gravity, moment of inertia.

**NARAYANA ENGINEERING COLLEGE (AUTONOMOUS) ::  
NELLORE**

| <b>APPLIED PHYSICS</b> |              |   |   |           |          |           | R2021 |       |
|------------------------|--------------|---|---|-----------|----------|-----------|-------|-------|
| Semester               | Hours / Week |   |   | Total hrs | Credit C | Max Marks |       |       |
|                        | L            | T | P |           |          | CIE       | SEE   | TOTAL |
| I                      | 3            | 0 | 0 | 60        | 3        | 40        | 60    | 100   |

**Pre-requisite:** Mathematics Knowledge, Basics concepts of Physics

**Course Objectives:**

1. To understand optical phenomenon i.e. interference and diffraction related to their engineering applications.
2. To explain the concepts and difference between classical free electron theory and quantum theory.
3. To impart knowledge in basic concepts of free electron theory of metals and semiconductors.
4. To illustrate the concepts of superconductor and nanomaterials in functioning of electronic devices.
5. To familiarize the types of laser/optical fibres and their applications in communication engineering devices

**Course Outcomes:** After successful completion of the course, the student will be able to: BTL

|             |  |   |
|-------------|--|---|
| <b>CO 1</b> | Explain optical phenomenon i.e. interference, diffraction using Huygen's wave theory.                                    | 2 |
| <b>CO 2</b> | Comprehend the concepts of matter waves, wave functions and its interpretation to understand the matter at atomic scale. | 1 |
| <b>CO 3</b> | Comprehend Free electron theories on metals and physics of semiconductors  | 1 |
| <b>CO 4</b> | Understand the concepts of superconductors and nanomaterials to familiarize their applications in relevant fields.       | 2 |
| <b>CO 5</b> | Realize importance of LASERs and optical fibres in Engineering and Medical applications.                                 | 2 |

**CO-PO Mapping**

1: Low, 2-Medium, 3- High

**COURSE CONTENT**

|  |                    |                 |
|--|--------------------|-----------------|
| <b>MODULE – 1</b>  | <b>WAVE OPTICS</b> | <b>10 HOURS</b> |
| <p><b>Interference</b>-Principle of Superposition, Interference of light, Conditions for sustained Interference, derivation of conditions for constructive and destructive interference of reflected light from a thin film, Newton's Rings-experimental arrangement, Determination of Wavelength; engineering applications of Interference</p> <p><b>Diffraction</b>-distinction between interference and diffraction, differences between Fresnel &amp; Fraunhofer diffractions, Fraunhofer Diffraction at single slit(derivation, energy distribution curve) , Fraunhofer Diffraction at a Double slit (derivation, energy distribution curve),Theory of Diffraction Grating, Engineering applications of diffraction</p> |                    |                 |

|  |  |                 |
|--|--|-----------------|
| <p>At the end of the Module 1, students will be able to:</p> <ol style="list-style-type: none"> <li>1. <b>Explain</b> the need of coherent sources and the conditions for sustained interference (L2)</li> <li>2. <b>Identify</b> engineering applications of interference including homodyne and heterodyne detection (L3)</li> <li>3. <b>Analyze</b> the differences between interference and diffraction with applications (L4)</li> </ol>  |  |                 |
| <b>MODULE -2</b>   | <b>INTRODUCTION TO QUANTUM MECHANICS</b>                   | <b>9 HOURS</b>  |
| <p>Matter waves –de-Broglie hypothesis- properties, G.P.Thomson experiment, Phase and group velocities—Expression for group velocity; Heisenberg’s uncertainty principle; Schrodinger’s time dependent and independent wave equations – Physical significance of wave function-important characteristics of wave function, Eigen values and Eigen functions of a particle confined to one dimensional infinite square well (potential well).</p>   |  |                 |
| <p>At the end of the Module 2, students will be able to:</p> <ol style="list-style-type: none"> <li>1. <b>Explain</b> Quantum Mechanics to understand wave particle dualism (L2)</li> <li>2. <b>Necessity</b> of quantum mechanics to explore the behavior of sub atomic particles (L3)</li> <li>3. <b>Evaluate</b> the Eigen values and Eigen functions of a particle (L2)</li> </ol>   |  |                 |
| <b>MODULE-3</b>  | <b>FREE ELECTRON THEORY OF METALS &amp; SEMICONDUCTORS</b> | <b>10 HOURS</b> |
| <p>Classical free electron theory-assumptions, expression for electrical conductivity, merits and demerits; Quantum free electron theory of metals-expression for electrical conductivity; Fermi-Dirac distribution, Mathiesson rule, causes of electrical resistance in metals, Bloch’s theorem (Qualitative), Kronig - Penny Model (Qualitative), Classification of solids into conductors, semiconductors and insulators based on energy band gap.</p> <p>Semiconductors- Introduction – Intrinsic and Extrinsic semiconductors– Density of charge carriers, Electrical conductivity, Fermi level of intrinsic semiconductors ; Hall effect – Hall coefficient – Applications of Hall effect.</p> |  |                 |
| <p>At the end of the Module 3, students will be able to:</p> <ol style="list-style-type: none"> <li>1. <b>Demonstrate</b> the success of quantum free electron theory over classical free electron theory (L2)</li> <li>2. <b>Examine</b> the probability of occupancy of an electron in an energy state at different temperatures (L3)</li> <li>3. <b>Outline</b> the properties of n-type and p-type semiconductors and charge carriers (L2)</li> <li>4. <b>Identify</b> the type of semiconductor using Hall effect (L2)</li> </ol>   |  |                 |
| <b>MODULE-4</b>  | <b>SUPERCONDUCTORS AND NANOMATERIALS</b>                   | <b>10 HOURS</b> |
| <p>Superconductors- Introduction – Properties of superconductors – Meissner effect – Type I and Type II superconductors – BCS theory – Josephson effects (AC and DC) – Applications of superconductors.</p> <p>Nanomaterials– Significance of nanoscale , Properties of nanomaterials: Physical, mechanical, Magnetic, Optical ; Synthesis of nanomaterials: Top-down-Ball Milling, Bottom-up –Chemical vapour deposition ;Applications of Nano materials.</p>   |  |                 |
| <p>At the end of the Module 4, students will be able to:</p> <ol style="list-style-type: none"> <li>1. <b>Explain</b> how electrical resistivity of solids changes with temperature (L2)</li> <li>2. <b>Classify</b> superconductors based on Meissner’s effect (L2)</li> <li>3. <b>Explain</b> Meissner’s effect, BCS theory &amp; Josephson effect in superconductors (L2)</li> <li>4. <b>Identify</b> the nano size dependent properties of nanomaterials (L2)</li> <li>5. <b>Illustrate</b> the methods for the synthesis (L2)</li> <li>6. <b>Apply</b> the basic properties of nanomaterials in various Engineering branches (L3).</li> </ol>   |  |                 |
| <b>MODULE-5</b>  | <b>LASERS &amp; OPTICAL FIBERS</b>                         | <b>9 HOURS</b>  |

Lasers: Introduction, properties of lasers: monochromaticity, coherence, directionality, brightness; Spontaneous & stimulated emission of radiation, Einstein coefficients, Population inversion, Pumping methods, Types of lasers: Nd- YAG Laser, He-Ne Laser, Semiconductor laser; Applications.

Introduction to Optical Fibers-Total Internal Reflection-Critical angle of propagation-Acceptance angle-Numerical Aperture-Classification of optical fibers based on materials, modes and refractive index profile-Applications: fiber optic communication system and sensors.

At the end of the Module 5, students will be able to:

1. **Understand** the basic concepts of LASER light Sources (L2)
2. **Apply** the concepts to learn the types of lasers (L3)
3. **Identify** the Engineering applications of lasers (L2)
4. **Explain** the working principle of optical fibers (L2)
5. **Classify** optical fibers based on refractive index profile and mode of propagation (L2)

**Total hours: 48 hours**

**Content beyond syllabus:**

Types of magnetic materials and the applications.

Characterization of nano materials: (a) X-ray diffraction & Scanning electron microscope

**Self-Study:**

| 1: Low, 2-Medium, 3- High   |   |      |      |           |          |           |       |       |      |       |       |       |       |       |

| COURSE CONTENT  |   |                |
|---|---|----------------|
| <b>MODULE – 1</b>   | <b>INTRODUCTION TO ELECTRICAL &amp; MAGNETIC CIRCUITS</b> | <b>11hours</b> |
| Network elements, R, L and C Parameters, Kirchhoff's Laws - Independent and Dependent sources-Source Transformation, Network Reduction Techniques, Faraday's Laws of Electromagnetic Induction, Concept of Self and Mutual Inductance, Dot Convention, Coefficient of Coupling, Composite Magnetic Circuit, MMF Calculations. |   |                |
| At the end of Module 1, students will be able to:   |   |                |
| <ol style="list-style-type: none"> <li>Explain the network elements.(BL-2)</li> <li>Understand the Voltage, Current, Power, Direct Current (DC), Alternating Current.(BL-2)</li> </ol>  |   |                |
| <ol style="list-style-type: none"> <li>Explain the laws of electromagnetic induction.(BL-2)</li> </ol>  |   |                |
| <ol style="list-style-type: none"> <li>Explain the Single phase AC circuits.(BL-2)</li> </ol>   |   |                |
| <b>MODULE -2</b>  | <b>SINGLE PHASE AC CIRCUITS</b>                           | <b>10hours</b> |

|  |                                       |                             |
|--|---------------------------------------|-----------------------------|
| Introduction, R.M.S, Average Values and Form Factor for Different Periodic Wave Forms. Phase and Phase Difference, Steady State Analysis of R, L, C With series and parallel Sinusoidal Excitation.  |                                       |                             |
| At the end of the Module 3, students will be able to:  |                                       |                             |
| <ol style="list-style-type: none"> <li>1. Understand the advantages of single phase AC system. (BL-2)</li> <li>2. Explain the complex and polar forms representation.(BL-2)</li> <li>3. Find the AC circuits in order to determine the voltage, current and power for the given problem. (BL-2)</li> </ol> |                                       |                             |
| <b>MODULE -3</b>   | <b>RESONANCE &amp; LOCUS DIAGRAMS</b> | <b>10hours</b>              |
| Resonance: Introduction, Series Resonance and parallel resonance, resonance frequency, Q-factor, Bandwidth, Locus diagrams of RL, RC and RLC circuits and problems.  |                                       |                             |
| At the end of the Module 4, students will be able to:  |                                       |                             |
| <ol style="list-style-type: none"> <li>1. Explain AC circuits along with resonance and locus diagrams.(BL-2)</li> <li>2. Understand the effect of resonance on series and parallel resonance circuits.(BL-2)</li> <li>3. Explain the frequency response for a resonant circuits.(BL-2)</li> </ol>          |                                       |                             |
| <b>MODULE -4</b>   | <b>NETWORK TOPOLOGY</b>               | <b>9hours</b>               |
| Definitions – Graph – Tree, Incidence Matrix, Basic Cutset and Tieset matrices for planar networks - Nodal Analysis, Mesh Analysis, Super Node and Super Mesh Analysis for Dependent and Independent Voltage and Current Sources and DC & AC Excitations - Duality and Dual Networks.                      |                                       |                             |
| At the end of the Module 5, students will be able to:  |                                       |                             |
| <ol style="list-style-type: none"> <li>1. Understand the overview of topology for a given network. (BL-2)</li> <li>2. Find the graph for the given electrical network. (BL-2)</li> <li>3. Apply graph theory to solve network equations. (BL-3)</li> </ol>   |                                       |                             |
| <b>MODULE-5</b>  | <b>NETWORK THEOREMS</b>               | <b>08hours</b>              |
| Superposition theorem, Compensation theorem, Thevenin's theorem, Norton's theorem, Maximum power transfer theorem, Tellegen's theorem, Millman's theorem, Reciprocity theorem; Application of network theorems in solving DC and AC circuits.  |                                       |                             |
| At the end of the Module 6, students will be able to:  |                                       |                             |
| <ol style="list-style-type: none"> <li>1. Understand the way of approaching to solve for a given network. (BL-2)</li> <li>2. Solve theorems for finding the solutions of network problem.(BL-3)</li> <li>3. Explain the application of network theorems.(BL-2)</li> </ol>                                  |                                       |                             |
|  |                                       | <b>Total hours: 48hours</b> |

**Content beyond syllabus:**

1. Three Phase circuits and its Importance in Electrical Engineering.
2. Real time applications of network theorems.

**Self-Study:**

Contents to promote self-Learning:

| SNO | Topic  | Reference   |
|-----|--|---|

| 1: Low, 2-Medium, 3- High |      |      |      |      |      |      |      |      |      |       |       |       |       |       |

| COURSE CONTENT   |  |                 |
|--|--|-----------------|
| <b>MODULE – 1</b>  | <b>Fundamentals of Computers and Programming</b> | <b>10 HOURS</b> |
| <b>Introduction to Programming, Algorithms and Flowcharts:</b> Programs and Programming, Programming languages, Compiler, Interpreter, Algorithms, Flowcharts, How to Develop a Program.   |  |                 |
| <b>Basics of C:</b> Introduction, Character Set, Structure of a C Program, A Simple C Program, Variables, Data Types and Sizes, Declaration, Identifiers, Keywords, Constants, Assignment, and Initialization.   |  |                 |
| At the end of the Module 1, students will be able to:  |  |                 |
| <ol style="list-style-type: none"> <li>Solve problems using language independent notations. (BL - 3)</li> <li>Understand the compilers and interpreters. (BL - 2)</li> <li>Understand Basic Structured of Programming in C. (BL - 2)</li> <li>Develop algorithms and flowcharts for problems.(BL - 3)</li> <li>Understand various Tokens in C language.(BL - 2)</li> </ol> |  |                 |
| <b>MODULE -2</b>   | <b>Operators and Input and Output</b>            | <b>9 HOURS</b>  |
| <b>Operators and Expressions:</b> Arithmetic Operators, Relational Operators, Logical Operators, Bitwise Operators, Conditional Operator, Comma operator, sizeof operator, Expressions, L values and R values, Expression Evaluation- Precedence and Associativity, Type Conversion.   |  |                 |
| <b>Input and Output:</b> Basic Screen and Keyboard I/O in C, Formatted Input and Output, Unformatted Input and Output Functions.   |  |                 |
| At the end of the Module 2, students will be able to:  |  |                 |
| <ol style="list-style-type: none"> <li>Illustrate the working of expressions.(BL - 2)</li> <li>Understand the precedence and Associativity rules of operators. (BL - 2)</li> <li>Understand the rules of type conversion. (BL - 2)</li> <li>Explain the Formatted and Unformatted I/O functions. (BL - 2)</li> </ol>   |  |                 |
| <b>MODULE-3</b>  | <b>Control Statements and Functions</b>          | <b>10 HOURS</b> |
| <b>Control Statements:</b> Selection Statements - if, Nested if, if-else, Nested if-else, else-if ladder, switch   |  |                 |

Looping Statements - while, do-while, for, Nested loops, Unconditional Statements - goto, break, Continue, return.

**Functions:** Introduction, Using Functions, Passing Arguments to a Function, Working with Function, Scope and Extent, Recursion, The C Preprocessor, Storage classes

At the end of the Module 3, students will be able to:

1. Understand Selection Statements. **(BL - 2)**
2. Understand Looping and Unconditional Statements. **(BL - 2)**
3. Understand the basic concept of functions. **(BL - 2)**
4. Understand concepts of Recursion, Preprocessor and storage classes. **(BL - 2)**

|                 |                            |                 |
|-----------------|----------------------------|-----------------|
| <b>MODULE-4</b> | <b>Arrays and Pointers</b> | <b>10 HOURS</b> |
|-----------------|----------------------------|-----------------|

**Arrays and Strings:** Introduction, One-Dimensional Array, Multidimensional Arrays, Passing Arrays to Function, Strings - Declaration, Initialization, Printing Strings, String Input, Character Manipulation, String Manipulation, Arrays of Strings.

**Pointers:** Fundamentals, Pointer Declarations, Operations on pointers, Passing Pointers to a Function, Pointers and Arrays, Arrays of Pointers, Pointer to Pointer, Pointer to Functions, Command line arguments, Dynamic Memory Management.

At the end of the Module 4, students will be able to:

1. Understand the concept of Arrays. **(BL - 2)**
2. Understand the concept of pointers. **(BL - 2)**
3. Explain Dynamic Memory Management. **(BL -2)**

|                 |  |                |
|-----------------|--|----------------|
| <b>MODULE-5</b> | <b>User-Defined Data Types and Files</b> | <b>9 HOURS</b> |
|-----------------|--|----------------|

**Structures and Unions:** Basics of Structures, Nesting of Structures, Arrays of Structures, Structures and Pointers, Structures and Functions, Self-Referential Structures, Unions, Bit-fields, Enumerations, typedef.

**Files:** Introduction, Using Data Files in C, Working with Text Files, Random Accesses to Files.

At the end of the Module 5, students will be able to:

1. Explain user defined data types like structures and unions. **(BL - 2)**
2. Understand the concept of Self-Referential Structures. **(BL - 2)**
3. Understand the working of files. **(BL - 2)**

|                     |                 |
|---------------------|-----------------|
| <b>Total hours:</b> | <b>48 HOURS</b> |
|---------------------|-----------------|

**Content Beyond Syllabus:**

1. Analysis of Algorithms
2. Text Vs. Binary Files
3. Variable Length Argument Lists

**Self-Study:**

| 1: Low, 2-Medium, 3- High  |   |      |      |           |        |           |      |       |       |       |       |       |       |       |

| COURSE CONTENT  | CO   |
|---|------|
| <b>Task -1</b> Determination of Hall voltage and Hall coefficient of a given semiconductor using Hall effect.   |      |
| The objective :To determine<br>a) sign of the charge carriers,<br>b) charge carrier concentration,<br>c) mobility of the charge carriers of a given semiconductor | CO 1 |
| <b>Task - 2 To determine the resistivity of semiconductor by Four probe method</b>  |      |
| Objective: To determine the resistivity of semiconductor by Four probe method   | CO 1 |
| <b>Task -3</b> Determine the energy gap of a given semiconductor diode.   |      |
| Objective: To plot characteristics between reverse saturation current and $10^3 / T$ and find out the approximate value of Energy Band Gap in PN junction diode   | CO 1 |
| <b>TASK -4</b> Measurement of radius of curvature of a lens by Newton's rings method.   |      |

|  |      |
|--|------|
| Objective: To determine the wavelength of sodium light by Newton's Ring method<br>The key idea behind Newton's ring experiment is the thin film formation between a plane-convex lens and a glass plate. Due to this thin film of air a path difference occurs in the waves which reflect from the lower surface of the lens and the top surface of the glass plate. As a result of it, they superimpose and develop the interference pattern.   | CO 2 |
| <b>TASK -5. Determine the thickness of the wire using wedge shape method</b>   |      |
| Objective: To calculate the thickness of a thin wire by forming interference fringes using an air wedge arrangement.<br>The key idea behind this experiment is the formation of thin wedge shaped film between two plane glass plates. Due to this thin film of air, a path difference occurs between waves reflected from top and bottom surface of the film. On superimposition of these waves an interference pattern containing a number of straight line fringes will be produced   | CO 2 |
| <b>TASK-6 Determination of wavelength by plane diffraction grating normal incidence method</b>   |      |
| Objectives: 1. To understand the types of diffraction<br>2. To familiarize with the principle of diffraction in plane transmission grating<br>3. To know the procedure for standardization of the grating<br>4. To determine the wavelengths of prominent spectral lines of mercury spectrum.<br>An arrangement, which is equivalent in its action to a large number of parallel slits of same width separated by equal opaque spaces is called diffraction grating. It is constructed by ruling fine equidistant parallel lines on an optically plane glass plate with the help of a sharp diamond point.   | CO 2 |
| <b>TASK -7 Dispersive power of a diffraction grating</b>   |      |
| Objective: To determine Dispersive power of a diffraction grating<br>When white light passes through a grating, different wavelengths undergo different angles of diffraction. Hence white light split up into different colours and diffraction spectra of different orders will be produced. The angular dispersion or dispersive power of a grating is defined as the rate of change of angle of diffraction with the change of wavelength in a particular order of the spectrum.   | CO 2 |
| <b>TASK -8 Determination of wavelength of LASER light using diffraction grating</b>  |      |
| Objectives : 1. To determine the concept of diffraction<br>2. To determine the wavelength of the given Laser source.   | CO 3 |
| <b>TASK -9 . Laser: Diffraction at a single slit</b>   |      |
| Objective: Determination of width of a given single slit using laser diffraction method<br>Laser beam has high monochromaticity, coherence and directionality. Hence it forms a clear diffraction pattern and we can measure width of a single slit accurately.  | CO 3 |
| <b>TASK -10 To determine the numerical aperture and acceptance angle of a given optical fibre</b>  |      |
| Objective: To determine the numerical aperture and acceptance angle of a given optical fiber.<br>In optical fibres light travel by multiple total internal reflections. Numerical aperture represents light gathering power of optical fibre. Acceptance angle represents maximum limiting angle at one end of optical fibre for the light ray to travel by multiple total internal reflections through the core region of the fibre.<br>1. Optical fibers may be used for accurate sensing of physical parameters and fields like pressure, temperature and liquid level.<br>2. For military applications like fiber optic hydrophones for submarine and underwater sea application and gyroscopes for applications in ships, missiles and aircrafts. | CO4  |

|   |  |   |
|---|--|---|
| <b>Additional Experiments:</b>  |  |   |
| <b>TASK -11 Laser: Diffraction at a double slit</b>   |  |   |
| Objective: Determination of width of a given double slit using laser diffraction method.<br>With this experiment we can demonstrate diffraction nature of lasers and measure width of a double slit accurately.   |  | CO 3  |
| <b>TASK -12: Determination of Fermi energy of a metal.</b>  |  |   |
| Objective: To determine Fermi energy of a metal.<br>Fermi energy represents highest energy level occupied by the electron at 0 K in a metal.  |  | CO4   |
| Virtual lab: 1) Laser beam divergence and spot size<br><a href="https://vlab.amrita.edu/?sub=1&amp;brch=189&amp;sim=342&amp;cnt=1">https://vlab.amrita.edu/?sub=1&amp;brch=189&amp;sim=342&amp;cnt=1</a><br>2. | CO3                       | 3    | 3    | 2    |      |      |      |      |      | 2    | 2     |       |       |       |       |
| 1: Low, 2-Medium, 3- High |      |      |      |      |      |      |      |      |      |       |       |       |       |       |

| COURSE CONTENT   | CO   |
|--|------|
| <b>Task 1 - Verification of Kirchhoff's laws</b>   |      |
| <b>Objective:</b><br>To verify the KCL and KVL for a given circuit   | CO 1 |
| <b>TASK-2 Determination of Self, Mutual Inductances and Coefficient of Coupling</b>                                    |      |
| <b>Objective:</b><br>To determine the self and mutual inductances and coefficient of coupling for two inductive coils. | CO 1 |
| <b>TASK-3 Measurement of current in various branches of RLC series and draw the phasor diagram.</b>                    | CO 2 |
| <b>Objective:</b> To Analyze the series and parallel RLC circuits  |      |
| <b>TASK-4 Locus Diagrams of RL, RC Series Circuit.</b>   |      |
| <b>Objective:</b><br>To Plot the current locus diagrams for Series RL,RC circuit.                                      | CO 2 |
| <b>TASK-5 Frequency response of series &amp; parallel resonance circuit with analysis and design</b>                   |      |
| <b>Objective:</b><br>To determine resonant frequency, band width and Q-factor for series & parallel RLC circuits       | CO 3 |
| <b>TASK-6 Verification of Thevenin's and Norton's theorems</b>   |      |
| <b>Objective:</b><br>To verify the Thevenin's and Norton's Theorem   | CO 4 |
| <b>TASK-7 Verification of Reciprocity and Millman's Theorems</b>   |      |
| <b>Objective:</b><br>To verify the reciprocity and Millman's Theorems  | CO 4 |

|   |      |
|---|------|
| <b>TASK-8 Verification of Superposition Theorem</b>               |      |
| <b>Objective:</b><br>To verify the superposition theorem          | CO 4 |
| <b>TASK-9 Verification of Maximum Power Transfer Theorem</b>      |      |
| <b>Objective:</b><br>To verify the Maximum power transfer theorem | CO 4 |
| <b>TASK-10 Verification of compensation Theorem</b>               |      |
| <b>Objective:</b><br>To verify the compensation theorem           | CO 4 |

|   |      |
|---|------|
| <b>Additional Experiments:</b>  |      |
| <b>TASK-11</b> Verification of mesh & nodal analysis using digital simulation.  | CO 1 |
| <b>Objective:</b><br>To verify mesh analysis using digital simulation.  |      |
| <b>TASK-12</b> Verification of different theorems using digital simulation.   | CO 1 |
| <b>Objective:</b><br>To verify different theorems using digital simulation  |      |
| <b>Virtual Labs:</b> <ol style="list-style-type: none"> <li>1. Parallel RC Circuits</li> <li>2. Parallel LC Circuits</li> <li>3. Thevenin's theorem</li> <li>4. Series RL Circuits</li> <li>5. Norton's Theorem</li> <li>6. Series LCR Circuit</li> </ol> |      |
| <b>Self-Study:</b><br>Contents to promote self-Learning:  |      |

| PART – A ENGINEERING WORK SHOP   |
|--|
| COURSE CONTENT (TRADES FOR PRACTICE)   |
| <b>Trade -1 Carpentry (6 H)</b>  |
| Familiarity with different types of woods and tools used in wood working and make following joints from out of 300x40x25 mms of two od stock. <ol style="list-style-type: none"> <li>Half-Lap joint.</li> <li>Mortise and Tenon joint</li> </ol> |
| <b>Trade-2 Fitting (6 H)</b>   |
| i.]Familiarity with different types of tools used in fitting and do the fitting exercises out of 80 x 50 x 5 mm M.S. stock <ol style="list-style-type: none"> <li>V-fit</li> <li>Dovetail fit</li> </ol>   |
| <b>Trade - 3 Sheet Metal Work (6 H)</b>  |
| Familiarity with different types of tools used in sheet metal working, Developments of following sheet metal job from out of 22 or 20 guage G.I. sheet <ol style="list-style-type: none"> <li>Tapered tray</li> <li>Conical funnel</li> </ol>    |

|  |
|--|
| <b>Trade - 4 Electrical House Wiring (6 H)</b>   |
| Familiarities with different types of basic electrical circuits and make the following electrical connections<br>a) Two lamps in series<br>b) Two way switch<br>c) Tube light<br>d) Two lamps in parallel with 3 pin plug and switches |
| <b>Trade 5 - Welding</b>   |
| Familiarity with different types of tools used in welding and do the following welding exercises<br>1. Single V butt joint<br>2. Lap joint   |

|  |
|--|
| <b>PART B: ITWORK SHOP</b>   |
| <b>Task-1 Learn about Computer (4H)</b>  |
| Identify the internal parts of a computer and its peripherals. Represent the same in the form of diagrams including Block diagram of a computer. Write specifications for each part of a computer including peripherals and specification of Desktop computer. Submit it in the form of a report.  |
| <b>Task -2 Assembling a Computer (4H)</b>  |
| Disassemble and assemble the PC back to working condition. Troubleshoot the computer and identify working and non-working parts. Identify the problem correctly by various methods available (eg: beeps). Record the process of assembling and trouble-shooting a computer.  |
| <b>Task-3 Install Operating system (2H)</b>  |
| Install Linux, any other operating system (including proprietary software) and make the system dual boot or multi boot. Record the entire installation process.  |
| <b>TASK-4 Operating system features (2H)</b>   |
| Record various features that are supported by the operating system(s) installed. Submit a report on it. Access CD/DVD drives, write CD/DVDs, access pen drives, print files, etc. Install new application software and record the installation process.  |
| <b>TASK-5 Word Processor (6H)</b>  |
| Create documents using the word processor tool. Tasks to be performed are inserting and deleting the characters, words and lines, Alignment of the lines, Inserting header and Footer, changing the font, changing the colour, including images and tables in the word file, making page setup, copy and paste block of text, images, tables, linking the images which are present in other directory, formatting paragraphs, spell checking, etc. Prepare project cover pages, content sheet and chapter pages at the end of the task using the features studied. Submit a report of the word processor considered.<br><br>Create documents using the word processor tool. Mail Merge in word processor for creating appointment orders for 10 employee records in excel. |
| <b>TASK-6 Spreadsheet (4H)</b>   |
| To create, open, save the spreadsheet and format them as per the requirement. Some of the tasks to be practiced are Managing the worksheet environment, creating cell data, inserting and deleting cell data, format cells, adjust the cell size, applying formulas and functions, preparing charts, sorting cells, working with pivot tables and charts. Submit a report of the Spreadsheet application   |

|   |
|---|
| considered.   |
| <b>TASK-7 Presentations (6H)</b>  |
| To create, open, save and run the presentations, Select the style for slides, format the slides with different fonts, colors, create charts and tables, insert and delete text, graphics and animations, bulleting and numbering, hyperlink, set the time for slide show, Record slide show. Submit a report of the Presentation tool considered. |
| <b>TASK-8 Wired network &amp; Wireless network (4H)</b>   |
| Select a LAN cable, Identify the wires in the cable, Define the purpose of each wire, Study the RJ45 connector, Use crimping tool to fix the cable to the connector, Test the cable using LAN tester, Connect two or more computers using cross and straight cables, Configure the computers, share the data between the computers.               |

|   |
|---|
| <b>Additional Experiments:</b>  |
| <b>TASK -1 IoT</b>  |
| Raspberry Pi Study the architecture of Raspberry pi, configure software, Install SD card, Connect the cables, Install Raspbian (or any other) operating system, Configure Wi-Fi, Remotely connect to your Raspberry Pi. |
| <b>TASK -2 OUTLOOK, MACROS</b>  |
| Practice the following tasks and submit report<br>A. Configure outlook and access mails.<br>B. Create Macros in word and spreadsheet tools  |
|   |

| COURSE CONTENT   |  | CO   |
|--|--|------|
| <b>TASK-1 (3H)</b>   |  |      |
| 1Practice DOS and LINUX Commands necessary for execution of C Programs.<br>2Study of the Editors, Integrated development environments, and Compilers in chosen platform.<br>3Write, Edit, Debug, Compile and Execute Sample C programs to understand the Programming environment.  |  | CO 1 |
| <b>TASK-2 (3H)</b>   |  |      |
| 1. Practice programs: Finding the sum of three numbers, exchange of two numbers, largest of two numbers, to find the size of data types, Programs on precedence and Associativity of operators, sample programs on various library functions.  |  | CO 1 |
| <b>TASK-3 (6H)</b>   |  |      |
| 1. Write a program to find the roots of a Quadratic equation.<br>2. Write a C program to calculate the factorial of a given positive integer.<br>3. Fibonacci sequence is defined as follows: the first and second terms in the sequence are 0 & 1. Subsequent terms are found by adding the preceding two terms in the sequence. Write a C program to generate the first n terms of the sequence. |  | CO1  |
| <b>TASK-4 (6H)</b>   |  |      |

|   |      |
|---|------|
| 4. Write a C program to find the sum of individual digits of a positive integer.<br>1. Write a program to reverse the digits of a number.<br>2. Write a program to generate the series of prime numbers in the given range.<br>7. Write a program to check for number palindrome.   | CO 2 |
| <b>TASK-5 (6H)</b>  |      |
| 1. Write a C program for the following that use both recursive & non-recursive functions:<br>a. To calculate the factorial of a given positive integer.<br>b. To find the greatest common divisor of two given integers.<br>c. To generate Fibonacci series.<br>2. Illustrate the use of auto, static, register and external variables. | CO 2 |
| <b>TASK-6 (3H)</b>  |      |
| 1. Write a program to find the sum of positive and negative numbers in a given set of numbers.<br>2. Write C code to reverse the elements of the array. For example, [1,2,3,4,5] should become [5,4,3,2,1]<br>3. Write a program to find the maximum of a set of numbers.   | CO 3 |
| <b>TASK-7 (6H)</b>  |      |
| 1. Write a C program that use pointers to find Addition of Two Matrices<br>2. Write a C program that use functions to find Multiplication of Two Matrices   | CO 3 |
| <b>TASK-8 (3H)</b>  |      |
| 1. Write a program to accept a line of characters and print the number of vowels, Consonants, blank spaces, digits and special characters.<br>2. Write a C program to check whether a given string is a palindrome or not, without using any built-in functions.  | CO 3 |
| <b>TASK-9 (6H)</b>  |      |
| 1. Write a C program to find the length of a given string using pointers.<br>2. Write a C program to add two distances in feet and inches using structure<br>3. Write a C program to read and print an employee's detail using structure<br>4. Write a C program to read and print book information using union                         | CO 4 |
| <b>TASK-10 (6H)</b>   |      |
| 1. Write a program to split a "file" into two files, say file1 and file2. Write lines into the 'file' from standard input. Read the contents from 'file' and write odd numbered lines into file1 and even numbered lines into file2.<br>2. Write a program to merge two files.  | CO 4 |
| <b>ADDITIONAL TASKS</b>   |      |
| 1. Write a program to find the Abundant Number<br>2. Write a program to insert the element in a given position  |      |

#### Virtual Labs:

1. Problem Solving Lab (IIIT HYDERABAD) : <http://ps-iiith.vlabs.ac.in/>

#### List of Experiments

| COURSE CONTENT  |                                     |               |
|---|-------------------------------------|---------------|
| MODULE – 1  | <b>Structure and Bonding Models</b> | <b>10 Hrs</b> |
| <b>Structure and Bonding Models:</b> Dual nature of matter- De Broglie's equation, Schrodinger wave equation, Molecular orbital theory – bonding in homo and hetero nuclear diatomic molecules– energy level diagrams of O <sub>2</sub> and CO, etc. $\pi$ -molecular orbital's of butadiene and benzene, calculation of bond order and magnetic properties, Crystal field theory – salient features – splitting in octahedral and tetrahedral complex. |                                     |               |
| At the end of the Module 1, student will be able to:  |                                     |               |
| <ol style="list-style-type: none"> <li><b>Understand</b> the fundamental concepts of chemistry to predict the structure, properties and bonding of Engineering materials.(BL-2)</li> <li><b>Explain</b> the calculation of bond order of O<sub>2</sub> and Co molecules.(BL-2)</li> <li><b>Discuss</b> the magnetic behavior and colour of coordination compounds.(BL-2)</li> </ol>   |                                     |               |
| MODULE -2   | <b>Electro Chemistry</b>            | <b>10 Hrs</b> |

**Electro chemistry:** Electrode potential, EMF of an electrochemical cell, Nernst equation, Electrodes – concepts, reference electrodes (standard hydrogen, Calomel electrode, and glass electrode), potentiometry-potentiometric titrations (red ox titrations), concept of conductivity, conductometric titrations (acid- base titrations). PV Cell and its applications.

At the end of the Module 2, students will be able to:

1. **Demonstrate** competency in the basic concepts of electrochemical cells. **(BL-3)**
2. **Explain** the significance of electrode potentials. **(BL-2)**
3. **List** the different types of electrodes. **(BL-1)**
4. **Differentiate** between Potentiometric and conductometric titrations. **(BL-2)**
5. **Illustrate** the construction of PV cell. **(BL-3)**

**MODULE-3**

**Battery Technology**

**09 Hrs**

**Battery Technology:** Introduction, classification of batteries, Important applications of batteries, Modern batteries- zinc-air, lithium cells, Li- MnO<sub>2</sub> cell, Ni-Cd cell, lead acid storage cell. Fuel cells- Introduction – classification, hydrogen - oxygen fuel cell, methanol - oxygen fuel cell, SOFC - Merits and demerits of fuel cell.

At the end of the Module 3, students will be able to:

1. **Classify** batteries into different types. **(BL-3)**
2. **Explain** the concept involved in the construction of batteries. **(BL-2)**
3. **Identify** the significance of batteries. **(BL-1)**
4. **Compare** the merits of different fuel cells. **(BL-2)**

**MODULE-4**

**Polymer Chemistry**

**10 Hrs**

**Polymer Chemistry:** Introduction to polymers, polymerization, types of polymerization, mechanism of polymer formation. Plastics - Thermoplastics and Thermosetting, Preparation, properties and applications of –PVC, PTFE, Bakelite, Urea- formaldehyde resin, Nylons. Natural Rubber, processing, vulcanization. Elastomers–Buna-S, Buna-N–preparation, properties and applications. Conducting polymers – poly acetylene, poly aniline, mechanism of conduction and applications.

At the end of the Module 4, students will be able to:

1. **Identify** different types of polymers. **(BL-1)**
2. **Distinguish** between thermoplastic and thermo setting resins. **(BL-2)**
3. **Explain** the preparation, properties and applications of some plastic materials. **(BL-2)**
4. **Apply** the knowledge of advanced polymers, conducting polymers for different Applications. **(BL-3)**

**MODULE-5**

**Fuel Technology**

**09 Hrs**

**Fuel Technology:** Introduction, Types of fuels, characteristics of good fuel, units, calorific value, HCV & LCV, Solid fuels, Analysis of coal-proximate and ultimate. Liquid Fuels: refining of petroleum, synthetic petrol preparation by Fischer- tropesch Process, Gaseous fuels; Natural gas, water gas, producer gas and coal gas.

At the end of the Module 5, students will be able to:

1. **Differentiate** petroleum, petrol, synthetic petrol and have knowledge how they are produced. **(BL-2)**
2. **Select** suitable fuels for IC engines. **(BL-1)**
3. **Explain** calorific values, octane number, refining of petroleum and cracking of oils. **(BL-2)**

**Total hours: 48 Hours**

**Content beyond syllabus:**

1. Valency bond theory
2. Compounding of natural rubber
3. Fuel analysis and methods for preparation of synthetic petrol

**Self-Study:**

Contents to promote self-Learning:

| COURSE CONTENT   |  |                          |
|--|--|--------------------------|
| <b>MODULE – 1</b>  | <b>Vector Calculus</b>   | <b>Hours: 12h(9L+3T)</b> |
| Scalar and vector point functions, vector operator del, del applies to scalar point functions Gradient, del applied to vector point functions-Divergence and Curl, Line integra circulation-work done, surface integral-flux, Green’s theorem in the plane (without proof), Stoke’s theorem (without proof), volume integral, Divergence theorem (without proof) and applications of these theorems. |  |                          |
| At the end of the Module 1, students will be able to:  |  |                          |
| 1.   | Apply del to Scalar and vector point functions                           | (L-3)                    |
| 2.   | Illustrate the physical interpretation of Gradient, Divergence and Curl  | (L-2)                    |
| 3.   | Apply del to scalar and vector point functions.                          | (L-3)                    |
| 4.   | Illustrate the physical interpretation of gradient, divergence and curl. | (L-2)                    |
| <b>MODULE -2</b>   | <b>Complex variables – Differentiation</b>                               | <b>Hours: 12h(9L+3T)</b> |
| Introduction to functions of complex variable-concept of Limit & continuity Differentiation, Cauchy-Riemann equations, analytic functions, harmonic functions finding harmonic conjugate-construction of analytic function by Milne Thomson method.  |  |                          |

|   |   |                           |
|---|---|---------------------------|
| At the end of the Module 2, students will be able to:   |   |                           |
|   | 1. Find the work done in moving a particle along the path over a force field                                | (L-1)                     |
|   | 2. Evaluate the rates of fluid flow along and across curves.  | (L-5)                     |
|   | 3. Evaluation of surface areas integrals by applying Green's theorems.                                      | (L-5)                     |
|   | 4. Evaluation of volume integrals by applying Gauss theorems.   | (L-5)                     |
|   | 5. Evaluation of line integrals by applying Stokes theorems.  | (L-5)                     |
| <b>MODULE-3</b>   | <b>Complex variables – Integration</b>  | <b>Hours: 12h(9L+3T)</b>  |
| Line integral-Contour integration, Cauchy's integral theorem (without proof) Cauchy Integral formula (without proof), zeros of analytic functions, singularities Laurent's series; Residues, Cauchy Residue theorem (without proof), Evaluation of definite integral involving sine and cosine, Evaluation of certain improper integrals (around unit circle semi-circle with $f(z)$ not having poles on real axis).  |   |                           |
| At the end of the Module 3, students will be able to:   |   |                           |
|   | 1. Understand the integration of complex functions.   | (L-3)                     |
|   | 2. Apply Cauchy's integral theorem and Cauchy's integral formula.   | (L-3)                     |
|   | 3. Understand singularities of complex functions.   | (L-3)                     |
|   | 4. Evaluate improper integrals of complex functions using Residue theorem.                                  | (L-3)                     |
| <b>MODULE-4</b>   | <b>Laplace Transforms</b>   | <b>Hours: 16h(12L+4T)</b> |
| Definition-Laplace transform of standard functions-existence of Laplace Transform Inverse transform – First shifting Theorem, transforms of derivatives and integrals Unit step function– Second shifting theorem–Dirac's delta function Convolution theorem Laplace transform of Periodic function. Differentiation and integration of transform solving Initial value problems to ordinary differential equations with constant coefficients using Laplace transforms |   |                           |
| At the end of the Module 4, students will be able to:   |   |                           |
|   | 1. Understand the concept of Laplace transforms and find the Laplace transforms of elementary functions.    | (L-3)                     |
|   | 2. Find the Laplace transforms of general functions using its properties.                                   | (L-2)                     |
|   | 3. Understand Laplace transforms of special functions (Unit step function, Unit Impulse & Periodic).        | (L-3)                     |
|   | 4. Apply Laplace transforms to solve Differential Equations.  | (L-3)                     |
| <b>MODULE-5</b>   | <b>Fourier Transform Fourier Series &amp; Fourier Transforms</b>  | <b>Hours: 12h(9L+3T)</b>  |
| <b>Fourier Series:</b> Determination of Fourier coefficients (Euler's)–Dirichlet conditions for the existence of Fourier series–functions having discontinuity-Fourier series of Even and odd functions – Half-range Fourier sine and cosine expansions.  |   |                           |
| <b>Fourier Transform:</b> Fourier integral theorem (without proof)–Fourier sine and cosine integrals-complex form of Fourier integral. Fourier transform Fourier sine and cosine transforms Properties – Inverse transforms.  |   |                           |
| At the end of the Module 5, students will be able to:   |   |                           |
|   | 1. Understand the concepts of Fourier transforms.   | (L-2)                     |
|   | 2. Apply the properties of Fourier transforms to various engineering problems.                              | (L-3)                     |
|   | 3. Apply the concepts of Fourier transforms to Find impulse.  | (L-3)                     |
|   | 4. Make use of the Fourier transforms and its inverse in practical applications of electronics engineering. | (L-3)                     |
| <b>Total hours</b>  |   | <b>64</b>                 |

**Content beyond syllabus**

1. Complex Fourier series.
2. Parseval's Identity for Fourier Transforms.

**Self-Study:**

Contents to promote self-Learning:

| COURSE CONTENT  |                                      |            |
|---|--------------------------------------|------------|
| <b>MODULE – 1</b>   | <b>I/O and Decision Structures</b>   | <b>10H</b> |
| <b>Input and Output:</b> Introduction to Python and installation, Input and Output, Comments, Variables, Operators. Type conversions, Expressions, Data types.<br><b>Decision Structures and Boolean Logic:</b> if, if-else, if-elif-else Statements, Nested Decision Structures.<br><b>Looping:</b> while loop, for loop, Nested Loops.    |                                      |            |
| At the end of the Module 1, students will be able to: <ol style="list-style-type: none"> <li><b>Describe</b> python expressions, data types (BL-2)</li> <li><b>Perform</b> various Arithmetic calculations using Operators in Python(BL-3)</li> <li><b>Demonstrate</b> the usage of looping structures in python Language.(BL-3)</li> </ol> |                                      |            |
| <b>MODULE -2</b>  | <b>Functions and Data structures</b> | <b>10H</b> |
| <b>Functions:</b> Definition, Function Arguments, Anonymous Function, Scope of the variable and name spacing, Recursion, Map, Filter and Reduce Functions   |                                      |            |

|   |                                      |  |
|---|--------------------------------------|--|
| <b>Strings, Lists, Tuples and Dictionaries:</b> String Methods and Operations, Lists: Operations and Methods, Tuples: Operations and Methods, Dictionaries: Operations and Methods.   |                                      |  |
| At the end of the Module 2, students will be able to:   |                                      |  |
| <ol style="list-style-type: none"> <li>5. <b>Implement Functions</b> to solve problems.(BL-3)</li> <li>6. <b>Describe</b> various <b>String</b> handling functions in python(BL-2)</li> <li>7. <b>Describe</b> the various <b>Lists, Tuples and Dictionaries</b> in python(BL-2)</li> </ol>   |                                      |  |
| <b>MODULE-3</b>   | <b>Files and Modules</b>             | <b>10H</b>   |
| <b>Files:</b> Text Files, File Operations, File Functions, Copying the Files, Two Files Merging into Single File.   |                                      |  |
| <b>Modules:</b> Modules, Standard Modules, Packages.  |                                      |  |
| At the end of the Module 3, students will be able to:   |                                      |  |
| <ol style="list-style-type: none"> <li>1. Describe the concepts of Files (BL-2).</li> <li>2. Describe the importance of Modules and packages (BL-2).</li> </ol>   |                                      |  |
| <b>MODULE-4</b>   | <b>Introduction to Numpy</b>         | <b>9H</b>  |
| <b>Introduction to Numpy:</b> Fixed-Type Arrays in Python, Creating Arrays from Lists, Creating Arrays from Scratch Numpy Standard Data Types, The Basics of Numpy Arrays, Numpy Array Attributes.  |                                      |  |
| <b>Array Indexing:</b> Accessing Single Elements, Array Slicing: Accessing Subarrays, Reshaping of Arrays, Array Concatenation and Splitting. Computation on Numpy Arrays: Universal Functions.   |                                      |  |
| At the end of the Module 4, students will be able to:   |                                      |  |
| <ol style="list-style-type: none"> <li>1. Describe the concept of <b>Numpy</b> Module(BL-2)</li> <li>2. Solve numerical problems related to data science using <b>Numpy Arrays</b>.(BL-3)</li> <li>3. Apply <b>Universal Functions</b> for Data Science problems(BL-3)</li> </ol>   |                                      |  |
| <b>MODULE-5</b>   | <b>Data Manipulation with Pandas</b> | <b>9H</b>  |
| <b>Data Manipulation with Pandas:</b> Installing and Using Pandas, Introducing Pandas Objects, Pandas Series Object, Pandas DataFrame Object, Pandas Index Object, Data Indexing and Selection Data Selection in Series.  |                                      |  |
| <b>Data Selection in DataFrame Operating on Data in Pandas Ufuncs:</b> Index Preservation UFuncs: Index Alignment, Operations Between DataFrame and Series, Handling Missing Data, Trade-Offs in Missing Data Conventions, Missing Data in Pandas, Operating on Null Values.  |                                      |  |
| At the end of the Module 5, students will be able to:   |                                      |  |
| <ol style="list-style-type: none"> <li>1. Describe the concept of <b>Data Manipulation</b> (BL-2).</li> <li>2. Describe the concept of <b>Pandas</b> for Data Science(BL-2)</li> <li>3. Apply Ufunctions in pandas to generate <b>DataFrame</b> (BL-3)</li> <li>4. Implement Pandas Module to handle <b>Missing Data</b>(BL-3)</li> </ol> |                                      |  |
| <b>Total hours:</b>   |                                      | <b>48 HOURS</b>  |
| <b>Content Beyond Syllabus:</b>   |                                      |  |
| <ol style="list-style-type: none"> <li>1. Regular Expressions</li> <li>2. Matplotlib</li> </ol>   |                                      |  |
| <b>Self-Study:</b>  |                                      |  |
| Contents to promote self-Learning:  |                                      |  |
| <b>S No</b>   | <b>Module</b>                        | <b>Reference</b>   |
| 1   | I/O and Decision Structures          | <a href="https://www.youtube.com/watch?v=JBc8LLW5KlQ">https://www.youtube.com/watch?v=JBc8LLW5KlQ</a><br><a href="https://www.youtube.com/watch?v=PqFKRqpHrjw">https://www.youtube.com/watch?v=PqFKRqpHrjw</a> |

| I-B. Tech  | ENGLISH   |   |   |           |        |           |     | R-2021 |
| Semester   | Hours / Week  |   |   | Total hrs | Credit | Max Marks |     |        |
|  | L   | T | P |           |        | C         | CIE | SEE    |
| II   | 2   | 0 | 0 | 32        | 2      | 40        | 60  | 100    |
| <b>Pre-requisite:</b> ENGLISH  |   |   |   |           |        |           |     |        |
| <b>Course Objectives :</b>   |   |   |   |           |        |           |     |        |
| <ol style="list-style-type: none"> <li>1. To explore the students to develop knowledge and awareness of English sentence structure, construction and improvement.</li> <li>2. To develop the students in getting the information of word power and able them to fit for the competition.</li> <li>3. To enhance the ability of writing the structural English among the students.</li> <li>4. To demonstrate the ability to write error free written communication.</li> <li>5. To distinguish main ideas from specific details and make use of contextual clues to inform meanings of un familiar words.</li> </ol> |   |   |   |           |        |           |     |        |
| <b>Course Outcomes:</b> After successful completion of the course, the student will able to:   |   |   |   |           |        |           |     |        |
| <b>CO 1</b>  | Practice the formulating appropriate sentences with Grammatical accuracy and also develop concept of word formation. .(BL3)                                   |   |   |           |        |           |     |        |
| <b>CO 2</b>  | Use coherent and unified paragraphs with adequate support and detail and can write a topic sentence, support and concluding sentence. (BL3)                   |   |   |           |        |           |     |        |
| <b>CO 3</b>  | Analyze the concepts of various real time scenarios to represent in an effective model. (BL - 4)  |   |   |           |        |           |     |        |
| <b>CO 4</b>  | Explain the grammar rules for synthesis of sentences and use prewriting strategies to plan to write dialogues, reviews and edit the text effectively.(BL - 2) |   |   |           |        |           |     |        |
| <b>CO 5</b>  | Interpret the skills and sub skills of reading effectively and provide knowledge on the structure and format of technical writing.                            |   |   |           |        |           |     |        |

| COURSE CONTENT   |  |
|--|--|
| <b>MODULE – 1</b>  |  |
| <p><b>Grammar:</b> Parts of Speech - Kinds of Sentences – Sentence structures: Identifying the sentences, Sentence Pattern, Sentence Improvement and Construction, Sentence Completion, Sentence Arrangement, Joining sentences, Parajumbles.</p> <p><b>Vocabulary:</b> Concept of word formation – Synonyms&amp; Antonyms – Homonyms Homophones – Prefixes&amp;suffixes–CommonlyconfusedWords–Onewordsubstitutes–Idioms&amp;PhrasalVerbs.</p>         |  |
| <p>After the completion of this Module 1 students are able to:</p> <ol style="list-style-type: none"> <li>1. write the sentence on his/her own (L2)</li> <li>2. understand the structure of the sentencesand usage(L2)</li> <li>3. know the formation of words by using Affix(L1)</li> <li>4. Understand the similar words and their usage in different words(L1)</li> <li>5. enhance the knowledge of idiomatic language and its usage(L2)</li> </ol> |  |
| <b>MODULE -2</b>   |  |
| <p><b>Grammar&amp;Vocabulary:</b>Cohesivedevices-linkers,signpostsandtransitionsignals-Articles – Prepositions – Gerund - Verbs: Auxiliary verbs (Primary &amp; Modal) – Tenses – Subject Verbagreement.</p> <p><b>Writing :</b> Principles of writing: clarity, simplicity, brevity, single focus, organization of thoughts -sequencing the ideas – Punctuation - Question formation (Wh- questions, Yes or No</p>                                    |  |

|  |                 |
|--|-----------------|
| questions, Tag questions) - Letters (Formal & Informal) and Emails : Structure / template of common formal letters and emails: inquiry/complaint/placing an order.   |                 |
| At the end of the Module 2, students are able to:  |                 |
| <ol style="list-style-type: none"> <li>1. use the sign posts and transition signals in his/her daily life (L2)</li> <li>2. develop the knowledge in the use of preposition and Articles. (L2)</li> <li>3. Know the use the different types of tenses in his/her conversation.(L2)</li> <li>4. Improve the knowledge grammar and can be able to attain the success in competitive exams (L2)</li> <li>5. attain the idea of how to write the different types of letters which can improve his/her writing skills (L2)</li> <li>6. possess the knowledge of writing and formation of E mails (L2)</li> </ol> |                 |
| <b>MODULE-3</b>  |                 |
| <b>Grammar :</b> Active and Passive Voice - Direct & Indirect Speech – Comparison of Adjectives –Cause and effect–Verb noun Collocations & Adjective-Noun Collocations.  |                 |
| <b>Writing:</b> Note Making – Summarizing -Paragraph Writing – Paraphrasing: Techniques of paraphrasing- Replacement of words and phrases, change of sentence structures.  |                 |
| At the end of this Module 3, students are able to:   |                 |
| <ol style="list-style-type: none"> <li>1. Speak or write the sentences either in active form or in passive form.(L2).</li> <li>2. Develop the knowledge of verbal and adjective collocations.(L2).</li> <li>3. Know how to summarize paragraphs.(L2).</li> <li>4. Enhance the writing skills by using the techniques of paragraph writing. (L2).</li> </ol>  |                 |
| <b>MODULE-4</b>  |                 |
| <b>Grammar :</b> Misplaced modifiers - If Clauses - Simple, Compound, Complex Sentences - Spotting Errors.   |                 |
| <b>Writing :</b> Dialogue writing ( Formal & Informal ) -compare and contrast paragraphs- Writing of Reviews: Book/ Play/Movie   |                 |
| At the end of the Module 4, students are able to:  |                 |
| <ol style="list-style-type: none"> <li>1. develop the writing skills by using simple compound, complex sentences.(L2)</li> <li>2. spot the error of the writing and speaking skills.(L2)</li> <li>3. make conversations in formal and informal situations.(L2)</li> <li>4. Write the reviews by using good writing skills.(L2)</li> </ol>  |                 |
| <b>MODULE-5</b>  |                 |
| <b>Reading Skills :</b> Types of reading: Skimming, Scanning, Intensive & Extensive Reading –Reading Comprehension-Scramble Sentences-Complete the passage using contextual clues Identifying Main Ideas using Scanning - Technique Identifying Specific Ideas using Skimming Technique - Studying the use of graphic elements in texts to convey information, reveal trends/patterns/relationships, communicate processes or display complicated data.  |                 |
| <b>Writing:</b> Describing – Report Writing: definition - purpose – types – structure- formal and informal reports- stages in developing report-proposal, progress and final reports – examples.   |                 |
| After the completion of this module 5 students are able to:  |                 |
| <ol style="list-style-type: none"> <li>1. gain the knowledge of different types of reading.(L2)</li> <li>2. attain the good writing skills by using skimming and scanning.(L2)</li> <li>3. enhance the idea of getting the information by using pie, cycle, tree, graph, flow charts.(L2)</li> <li>4. write good reports on various incidents of her/his life.(L2)</li> </ol>  |                 |
| <b>Total hours:</b>  | <b>32 hours</b> |

**TextBooks:**

1. Contemporary English Grammar – Structures and Composition by David Green, MacMillan India, 2014.
2. Effective Technical Communication by Ashraf, MRizvi, Tata McGraw-Hill, 2006.

| COURSE CONTENT  | CO   |
|---|------|
| <b>Task-1:</b> Estimation of Ferrous Ion by using Potassium Dichromate  |      |
| <b>Objective:</b><br>1. Determine the percentage of ferrous iron in an unknown sample by redox titration with potassium dichromate solution.<br>2. The student will pre-treat the sample to obtain the iron in the reduced (+2 oxidation) state.<br>3. The student will use a solution of primary standard as the titrant   | CO 3 |
| <b>Task-2:</b> Conductometric titration of Weak acid vs. Strong base  |      |
| <b>Objective:</b><br>1. Perform a conduct metric titration of Weak acid with a strong base,<br>2. Determine the equivalence point of the titration by plotting titration curve using conductance values and amount of the base added during titration,<br>3. State the advantages conduct metric titrations.  | CO 2 |
| <b>Task-3 :</b> Conductometric titration of strong acid vs. strong base   |      |
| <b>Objective:</b><br>1. Perform a conductometric titration of strong acid with a strong base,<br>2. Determine the equivalence point of the titration by plotting titration curve using conductance values and amount of the base added during titration,<br>3. State the advantages conduct metric titrations.  | CO2  |
| <b>Task-4 :</b> Determination of cell constant and conductance of solutions   |      |
| <b>Objective:</b><br>1. To determine conductivity of the given water sample. by using conductivity meter<br>2. To understand the specific conductance.  | CO 1 |
| <b>Task-5 :</b> Potentiometry - Determination of red-ox potentials and emfs   |      |
| <b>Objective:</b><br>1. Determine the concentration of an unknown iron(II) solution. By using potentiometer<br>2. Discuss how the potential changes with relative concentration of oxidised/reduced from,<br>3. Perform a red-ox titration of ammonium iron (II) sulphate using potassium dichromate as oxidizing agent,<br>4. Determine the equivalence point of the redox titration by plotting titration curve using potential | CO 3 |

|   |      |
|---|------|
| change values and amount of oxidizing agent added during titration  |      |
| <b>Task-6 : Determination of Strength of an acid in Pb-Acid battery</b>   |      |
| <b>Objective:</b><br>1. To determine the half –reactions involved in spontaneous oxidation –reduction reactions.<br>2. Explain the function of the lead storage and dry cell batteries ...electrolysis involving two lead strips immersed in sulfuric acid.   | CO 4 |
| <b>Task-7 : Preparation of a Bakelite</b>   |      |
| <b>Objective:</b> To prepare phenol formaldehyde resin. (Bakelite)<br>1. Understand the differences between linear and cross linked polymers.<br>2. Compare and contrast the recycling properties of linear and cross linked polymers.<br>3. Compare the combustion properties of various types of material.<br>4. Define the following terms: polymer, monomer, repeat unit, cross linking, biopolymer | CO 4 |
| <b>Task-8: Determination of percentage Moisture content in a coal sample</b>  |      |
| <b>Objective:</b><br>1.To provide practical knowledge for developing experimental skill in using desicator to estimate moisture content in coal<br>2. Understand percentage of moisture in Coal sample.   | CO4  |
| <b>Task-9: Determination of percentage of Iron in Cement sample by colorimetry</b>  |      |
| <b>Objective:</b> 1.To use spectroscopy to relate the absorbance of a colored solution to its concentration.<br>2. To prepare a Beer’s Law Plot to determine the concentration of an unknown.   | CO 2 |
| <b>Task-10: Estimation of Copper by complexometric method</b>   |      |
| <b>Objective:</b><br>1. Determine the percentage of Copper in an unknown sample by Complex metric titration with EDTA solution.<br>2. The student will pre-treat the sample to obtain the Copper in the reduced state.<br>3. The student will use a solution of primary standard as the titrant   | CO 3 |

|  |      |
|--|------|
| <b>Additional Experiments:</b>   |      |
| <b>Task-11 : Determination of hardness of ground water sample</b>  |      |
| <b>Objective</b><br>1. Determine the total hardness (total calcium and magnesium ion concentration).<br>2. Learn how to titrate with EDTA solution.<br>3. Determine permanent hardness and the temporary hardness  | CO1  |
| <b>Task-12: pH metric titration of (i) strong acid vs. strong base, (ii) weak acid vs. strong base</b>   |      |
| <b>Objective:</b><br>1. To perform a pH metric titration of an acidic solution of known molarity.<br>2. To graph the volume of base added vs. the pH and to determine the equivalence point<br>3. To calculate the molarity of the basic solution  | CO 2 |

1: Low, 2-Medium, 3- High

**Pre-Requisite:** Basic Mathematics (Geometry)

**Course Objectives:**

1. To impart skills on using drawing instruments
2. To convey exact and complete information of any physical object.
3. To Construct Engineering Curves.
4. To Learn and practice basic AutoCAD commands.
5. To Instruct the utility of drafting & modelling packages in orthographic and isometric drawings

**COURSE CONTENT**  
**Part-A Manual Drawing**

|               |  |          |
|---------------|--|----------|
| <b>TASK-1</b> | <b>Introduction and Conic sections</b> | 10 Hours |
|---------------|--|----------|

**Introduction to Engineering graphics:** Principles of Engineering Graphics and their significance; various instruments used, drawing sheet sizes and title block, lettering, BIS conventions, types of lines and dimensioning methods.

**Geometrical constructions:** simple constructions, construction of Pentagon, Hexagon by general Method only.

**Conic Sections:** Types of conics: Ellipse, Parabola and Hyperbola (Eccentricity method only),

|                |                                 |          |
|----------------|---------------------------------|----------|
| <b>TASK--2</b> | <b>Orthographic Projections</b> | 10 Hours |
|----------------|---------------------------------|----------|

**Objectives and Principle of projection,** Methods of projections, Comparison between firstangle and third angle projection.

**Projections of points:** Projection of points placed in different quadrants.

**Projection of straight lines:** Fundamental concepts, Line parallel, perpendicular and inclined to one and two reference planes placed in first quadrant only.

|               |                              |          |
|---------------|------------------------------|----------|
| <b>TASK-3</b> | <b>Projections of Solids</b> | 15 Hours |
|---------------|------------------------------|----------|

**Projections of planes:** Projection of planes (Triangle, Square, Pentagon, Circle) parallel, Perpendicular and inclined to one and two reference planes placed in first quadrant only.

**Types of solids ;** Polyhedra, Solids of revolution,

**Projections of regular solids** (Prisms, Pyramids, Cylinders and Cone), with its axis

|  |   |                 |
|--|---|-----------------|
| Perpendicular to one plane and parallel to other plane, Axis inclined to one plane and parallel to other plane.  |   |                 |
| <b>TASK-4</b>  | <b>Isometric and Orthographic views</b>       | 10Hours         |
| <b>Isometric Projections:</b> Principles, Isometric scale, Isometric views, Conventions, Isometric views of lines, planes, simple solids (Cube, Cylinder, and Cone), and Conversion of Isometric views to Orthographic views.  |   |                 |
| <b>Part B Computer Aided Drafting</b>  |   |                 |
| <b>TASK-5</b>  | <b>Introduction to AutoCAD</b>                | 17 Hours        |
| Basic drawing and editing commands: line, circle, rectangle, erase, view, undo, redo, snap, object editing, moving, copying, rotating, scaling, mirroring, layers, templates, polylines, trimming, extending, stretching, fillets, arrays, dimensions. Dimensioning principles and conventional representations. |   |                 |
| <b>TASK-6</b>  | <b>Orthographic and Isometric Projections</b> | 18 Hours        |
| <b>Transformation of Isometric Projections into orthographic projections such as</b> simple solids such as cylinder, cone, square prism, pentagonal pyramid<br>Draw 3D model of mechanical components such as Stepped block, Bush bearing,   |   |                 |
| <b>Total hours:</b>  |   | <b>80 hours</b> |

**Pre-requisite:** Programming Knowledge

**Course Objectives:**

1. To gain knowledge on python program basics
2. To prepare students for building programs using control statements
3. To prepare students for solving the problems involving functions and files.
4. To gain knowledge Python Numpy module to solve complex mathematical problems involving matrices.
5. To gain Knowledge of data cleaning using Pandas.

**Course Outcomes:** After successful completion of the course, the student will be able to:

**CO1** Understanding and use of python- Basic Concepts (BL -2)

**CO2** Solve the Problems using python iterative statement (BL -3)

**CO3** Understand the concepts of files, modules (BL -2)

**CO-PO Mapping**

| CO         | PO  |     |     |     |     |     |     |     |     |      |      |      | PSO  |      |

1-Low, 2-Medium, 3- High

**COURSE CONTENT**

**Task-1 - Python Basics (4 H)**

1. Running instructions in Interactive interpreter and a Python Script
2. Write a program to purposefully raise Indentation Error and Correct it
3. Write a program to compute distance between two points taking input from the user (Pythagorean Theorem)
4. Write a program to convert a Binary number to Decimal number and verify if it is a Perfect number.

**Task-2 - Conditional Statements (2 H)**

1. Write a program to determine if a given string is a Palindrome or not
2. Write a program for Fibonacci sequence is generated by adding the previous two terms by starting with 1 and 2, the first 10 terms will be: 1, 2, 3, 5, 8, 13, 21, 34, 55, 89,

**TASK-3 - Functions (2 H)**

1. Write a function that draws a Pyramid with # symbols

```

#
# # #
# # # # #
# # # # # #

```

2. Choose any five built-in string functions of C language. Implement them on your own in Python. You should not use string related Python built-in functions.

**TASK-4 -Strings (4H)**

1. Write a program to use split and join methods in the string and trace a birthday with Dictionary data structure.
2. Write a program using map, filter and reduce functions

**TASK-5 - Lists (2H)**

1. Write program which performs the following operations on lists. Don't use built-in functions

- a) Updating elements of a list
- b) Concatenation of list's
- c) Check for member in the list
- d) Insert into the list
- e) Sum the elements of the list
- f) Push and pop element of list
- g) Sorting of list
- h) Finding biggest and smallest elements in the list
- i) Finding common elements in the list

**TASK-6 - Files (4H)**

1. Write a program to read the file content and count the number of vowels, consonants, digits and special characters in a given file.
2. Write a program to perform the following operations in Files:
  - a. Copy from one file to another file
  - b. Merge two files

**TASK-7 -- Introduction to Numpy (4 H)**

1. Write a NumPy program to compute the outer product of two given vectors.
2. Write a Numpy program to compute the determinant of a given square array.

**TASK-8 - Introduction to Numpy (2H)**

1. Write a Numpy program to calculate the difference between the maximum and the minimum values of a given array along the second axis.

Expected Output:

Original array:

```
[[ 0 1 2 3 4 5]
```

```
[ 6 7 8 9 10 11]]
```

Difference between the maximum and the minimum values of the said array:

```
[5 5]
```

**TASK-9 - Introduction to Pandas (4 H)**

1. Write a Pandas program to convert a Panda module Series to Python list and it's type.
2. Write a Pandas program to display most frequent value in a given series and replace everything else as 'Other' in the series

**TASK-10 - Introduction to Pandas (4 H)**

1. Write a Pandas program to identify the column(s) of a given DataFrame which have at least one missing value.
2. Write a Pandas program to replace NaNs with a single constant value in specified columns in a DataFrame.

**ADDITIONAL EXPERIMENTS**

**TASK – 11 – Lists, Strings, Tuples**

1. Write a python programs on lists
2. Write a python program on strings
3. Write a python program on tuples

**TASK – 12 - Pandas**

1. Write a Pandas program to interpolate the missing values using the Linear Interpolation method in a given DataFrame.
2. Write a Pandas program to import excel data (coalpublic2013.xlsx) into a Pandas DataFrame.

**Pre-requisite: Basic English Grammar**

**Course Objectives:**

1. To expose the students to develop knowledge and awareness of English phonetics be able to read and produce phonemic transcriptions
2. To sensitize the students to the nuances of English speech sounds, word accent, intonation and rhythm
3. To develop strategies appropriately to improve one's ability to listen and Use listening skills to create more effective, less confrontational, more productive professional and personal communication
4. To demonstrate his/her ability to write error free written communication
5. To distinguish main ideas from specific details and make use of contextual clues to infer meanings of unfamiliar words from context
6. To provide a structured methodology for participants to prepare and deliver an effective, high impact presentation that meets the objectives and brings results

**Course Outcomes:** After successful completion of the course, the student will be able to:

|             |  |
|-------------|--|
| <b>CO 1</b> | Understand how speech sounds are used to create meaning. Apply their knowledge of English phonetics and phonology to improve their own pronunciation.          |
| <b>CO 2</b> | Recognize and use pitch patterns to signal complete and incomplete thought groups and Speak confidently and intelligibly within groups and before an audience. |
| <b>CO 3</b> | Discuss and respond to content of a lecture or listening passage orally and/or in writing and make inferences and predictions about spoken discourse           |
| <b>CO 4</b> | Produce coherent and unified paragraphs with adequate support and detail and can write a paragraph with a topic sentence, support, and concluding sentence     |

| CO-PO Mapping |      |      |      |      |      |      |      |      |      |       |       |       |       |       |
|---------------|------|------|------|------|------|------|------|------|------|-------|-------|-------|-------|-------|

| COURSE CONTENT   |  |                 |
|--|--|-----------------|
| <b>MODULE – 1</b>  | <b>Special Functions</b>                   | <b>Hours:10</b> |
| Introduction to special functions, Beta function- Definition of beta function and its properties (with proof), Other forms of Beta function (with proof), Gamma function- Definition of Gamma function and its properties (with proof), Relation between Beta and Gamma functions (with proof) |  |                 |
| At the end of the Module 1, students will be able to:  |  |                 |
| 1. Understand Beta and Gamma functions and its relations.  |  | (L-3)           |
| 2. Explain the applications and the usefulness of these special functions.   |  | (L-2)           |
| 3. Use Beta & Gamma functions to evaluate different types of integral problems   |  | (L-1)           |
| 4. Apply the techniques of special functions in various engineering problems.  |  | (L-3)           |
| <b>MODULE -2</b>   | <b>Complex variables – Differentiation</b> | <b>Hours:10</b> |

|   |  |                 |
|---|--|-----------------|
| Introduction to functions of complex variable-concept of Limit & continuity- Differentiation, Cauchy-Riemann equations, analytic functions, harmonic functions, finding harmonic conjugate-construction of analytic function by Milne -Thomson method.  |  |                 |
| At the end of the Module 2, students will be able to:   |  |                 |
| <ol style="list-style-type: none"> <li>1. Understand functions of Complex variable and its properties. (L-3)</li> <li>2. Evaluate derivatives of complex functions. (L-5)</li> <li>3. Understand the analyticity of complex functions. (L-3)</li> </ol>   |  |                 |
| <b>MODULE-3</b>   | <b>Complex Variables – Integration</b>   | <b>Hours:8</b>  |
| Line integral-Contour integration, Cauchy’s integral theorem (without proof), Cauchy’s Integral formula (without proof), zeros of analytic functions, singularities, Laurent’s series; Residues, Cauchy Residue theorem (without proof), Evaluation of definite integral involving sine and cosine, Evaluation of certain improper integrals (around unit circle, semi-circle with $f(z)$ not   |  |                 |
| At the end of the Module 3, students will be able to:   |  |                 |
| <ol style="list-style-type: none"> <li>1. Understand the integration of complex functions. (L-3)</li> <li>2. Apply Cauchy’s integral theorem and Cauchy’s integral formula. (L-3)</li> <li>3. Understand singularities of complex functions. (L-3)</li> <li>4. Evaluate improper integrals of complex functions using Residue theorem. (L-5)</li> </ol>   |  |                 |
| <b>MODULE-4</b>   | <b>Solution of Algebraic, Transcendental Equations &amp; Interpolation</b>     | <b>Hours:10</b> |
| Introduction-Bisection method, Regula-falsi method, Newton Raphson method, Finite differences-Newton’s forward and backward interpolation formulae – Lagrange’s formulae.   |  |                 |
| At the end of the Module 4, students will be able to:   |  |                 |
| <ol style="list-style-type: none"> <li>1. Solve an algebraic or transcendental equation using an appropriate numerical method. (L-3)</li> <li>2. Understand the use of different operators in interpolation. (L-2)</li> <li>3. Find interpolating polynomials using Newton’s forward and backward formulae. (L-2)</li> <li>4. Understand the theoretical and practical aspects of the use of numerical methods. (L-2)</li> </ol>                          |  |                 |
| <b>MODULE-5</b>   | <b>Numerical integration &amp; Solution of ordinary differential equations</b> | <b>Hours:10</b> |
| Numerical Integration: Trapezoidal rule – Simpson’s 1/3 Rule – Simpson’s 3/8 Rule Numerical solution of Ordinary Differential equations: Solution by Taylor’s series-Picard’s Method of successive Approximations-Modified Euler’s Method- Runge-Kutta Method.  |  |                 |
| At the end of the Module 5, students will be able to:   |  |                 |
| <ol style="list-style-type: none"> <li>1. Apply numerical differentiation and integration techniques to various engineering problems. (L-3)</li> <li>2. Understand the techniques of Trapezoidal rule, Simpson’s 1/3 Rule, Simpson’s 3/8 Rule and its applications (L-2)</li> <li>3. Work out numerical differentiation whenever and wherever routine methods are not (L-1)</li> <li>4. Apply Runge-kutta method in engineering problems (L-3)</li> </ol> |  |                 |
| <b>Total hours</b>  |  | <b>48</b>       |

| <b>Introduction:</b> Overview of Data Structures, Implementation of Data Structures, Algorithm Specifications, Analysis of an Algorithm, Asymptotic Notations, Time-Space trade off, Arrays. <b>Searching:</b> Introduction, Basic Terminology, Linear Search and Binary Search Techniques and their complexities. |  |  |  |  |  |  |                 |  |
| <b>MODULE – 2</b>  |  |  | <b>Stacks and Queues</b>               |  |  |  | <b>9H</b>       |  |
| <b>Stacks:</b> Introduction, Representation of a Stack, Stack Operations, Applications of Stacks. <b>Queues:</b> Introduction, Representation of a Queue, Queue Operations, Various Queue Structures: Circular Queue, Double Ended Queue, Priority Queue, Applications of Queues.                                  |  |  |  |  |  |  |                 |  |
| <b>MODULE – 3</b>  |  |  | <b>Linked Lists and Sorting</b>        |  |  |  | <b>10H</b>      |  |
| Introduction, Singly linked lists, Doubly Linked Lists, Circular Linked Lists, Linked Stacks and Queues, Applications of Linked Lists. <b>Sorting:</b> Introduction, Bubble Sort, Selection Sort, Insertion Sort, Merge Sort, Quick Sort   |  |  |  |  |  |  |                 |  |
| <b>MODULE – 4</b>  |  |  | <b>Trees</b>                           |  |  |  | <b>10H</b>      |  |
| Introduction, Basic Terminologies, Definition and concepts, Representation of Binary Tree, operations on a Binary Tree, Binary Search Tree, Height balanced Binary Tree, B Trees.  |  |  |  |  |  |  |                 |  |
| <b>MODULE – 5</b>  |  |  | <b>Graphs &amp; Hashing</b>            |  |  |  | <b>10H</b>      |  |
| Graphs: Introduction, Graph Terminologies, Representation of Graphs, Graph Operations, Shortest Paths, Topological Sorting, Minimum Spanning Trees – Kruskal’s and Prim’s algorithms. Hashing: Introduction to Hash Table, Static Hashing, Dynamic Hashing.  |  |  |  |  |  |  |                 |  |
| <b>Total hours:</b>  |  |  |  |  |  |  | <b>48 hours</b> |  |

| COURSE CONTENT   |  |               |
|--|--|---------------|
| <b>MODULE – 1</b>  | <b>SEMICONDUCTOR DIODE&amp;SPECIAL SEMICONDUCTOR DEVICES</b> | <b>10 Hrs</b> |
| <p><b>Semiconductor Diode:</b> Principle and Structure of PN junction diode, Open circuited PN junction diode, Energy band diagram of PN diode, Diode current Equation, Volt-Ampere Characteristics, Temperature dependence of Volt-Ampere Characteristics, Diode capacitance.</p> <p><b>Special Semiconductor Devices:</b> Principle of operation and Characteristics of Varactor diode, Tunnel Diode, Photo diode, LED, SCR</p> <p>At the end of the Module 1, student will be able to:</p> <ol style="list-style-type: none"> <li>1. Define PN junction diode (BL-1)</li> <li>2. Explain the operation of PN junction diode for both forward and reverse bias. (BL-2)</li> <li>3. Explain the energy band diagram of PN junction diode (BL-2)</li> <li>4. Interpret the effect of temperature on V-I characteristics of PN junction diode (BL-2)</li> <li>5. Derive the expression for transition and diffusion capacitance (BL-2)</li> <li>6. Explain V-I Characteristics of various special diodes. (BL-2)</li> <li>7. Describe the principle of operation of thyristors. (BL-2)</li> </ol> |  |               |
| <b>MODULE -2</b>   | <b>RECTIFIERS &amp; FILTERS</b>                              | <b>10 Hrs</b> |
| <p><b>Diode applications:</b> P-N junction diode as a rectifier - Half Wave Rectifier, Full Wave Rectifier, Bridge Rectifier, rectifier parameters, Harmonic components in Rectifier Circuits. Clippers and Clampers (Qualitative Treatment only)</p> <p><b>Filters:</b> Inductor Filters, Capacitor Filters, L- section Filters, <math>\pi</math>- section Filters, bleeder resistor.</p> <p>At the end of the Module 2, students will be able to:</p> <ol style="list-style-type: none"> <li>1. Explain the operation of a bridge rectifier. (BL-2)</li> <li>2. Analyze the performance of rectifiers with and without filters. (BL-4)</li> <li>3. Design half wave and full wave rectifier circuits. (BL-4)</li> <li>4. Differentiate various rectifier circuits in terms of their parameter metrics.(BL-2)</li> <li>5. Explain the importance of bleeder resistor (BL-2)</li> </ol>  |  |               |
| <b>MODULE-3</b>  | <b>BIPOLAR JUNCTION TRANSISTOR</b>                           | <b>9 Hrs</b>  |
| <p><b>Bipolar junction Transistor :</b>Construction, Principle of Operation, transistor current components , transistor configurations, Transistor h-parameter model, calculation of h-parameters from characteristics, transistor as a switch, transistor as an amplifier.</p> <p>At the end of the Module 3, students will be able to:</p> <ol style="list-style-type: none"> <li>1. Discuss the current components and their relationships in BJT (BL-2)</li> <li>2. Explain principle, operation and applications of BJT (BL-2)</li> <li>3. Describe input and output Characteristics of BJT (BL-2)</li> <li>4. Differentiate BJT configurations (CB,CC,CE) (BL-2)</li> </ol>  |  |               |
| <b>MODULE-4</b>  | <b>TRANSISTOR BIASING</b>                                    | <b>10 Hrs</b> |
| <p><b>Transistor Biasing:</b> Need for biasing, operating point, load line analysis, Stabilization against variations in <math>I_{CO}</math>, <math>V_{BE}</math> and <math>\beta</math>, biasing and stabilization techniques: fixed bias, collector to base bias, voltage divider bias, bias compensation techniques, thermal runaway, heat sink and thermal stability.</p> <p>At the end of the Module 4, students will be able to:</p> <ol style="list-style-type: none"> <li>1. Explain principle, operation and applications of MOSFET (BL-2)</li> </ol>   |  |               |

|  |  |                 |
|--|--|-----------------|
| 2. Describe the operation and characteristics of Depletion MOSFET. (BL-2)<br>3. Explain the operation and characteristics of Enhancement MOSFET. (BL-2)<br>4. Differentiate enhancement and depletion mode MOSFET. (BL-2)  |  |                 |
| <b>MODULE-5</b>  | <b>METAL OXIDE SEMICONDUCTOR FIELD-EFFECT TRANSISTOR</b> | <b>9 Hrs</b>    |
| <b>MOSFET:</b> Construction of depletion mode and enhancement mode of NMOS and PMOS, Drain characteristics of MOSFET, Transfer Characteristics of MOSFET, MOSFET as a Switch, CMOS Inverter and it's Characteristics.  |  |                 |
| At the end of the Module 5, students will be able to: <ol style="list-style-type: none"> <li>1. Define biasing and stabilization (BL-1)</li> <li>2. Explain the importance of thermal stability (BL-2)</li> <li>3. Analyze the stabilization techniques. (BL-4)</li> <li>4. Differentiate compensation techniques. (BL-2)</li> </ol> |  |                 |
| <b>Total hours:</b>  |  | <b>48 Hours</b> |

| COURSE CONTENT  |   |             |
|---|---|-------------|
| <b>MODULE – 1</b>   | <b>NUMBER SYSTEMS &amp; BOOLEAN ALGEBRA</b> | <b>10 h</b> |
| Number Systems: Introduction, Number Systems, Number base conversions, 1's and 2's Complements, BCD code, Excess -3 codes, Gray code, ASCII code, Error Detection and Correction Codes. Boolean Algebra: Basic definition, Basic theorems and properties, Boolean Functions, Canonical & Standard forms, Logic gates, implementation of Boolean functions using logic gates |   |             |
| At the end of the Module 1, students will be able to:   |   |             |
| <ol style="list-style-type: none"> <li>List number systems. (BL-1)</li> <li>Illustrate different code conversions. (BL-2)</li> <li>List Theorem's and properties of Boolean algebra (BL-1)</li> <li>Explain the functionality of logic gates(BL-2)</li> </ol>   |   |             |
| <b>MODULE -2</b>  | <b>SIMPLIFICATION OF BOOLEAN FUNCTIONS</b>  | <b>10 h</b> |
| Introduction, Karnaugh map simplification, Don't care conditions, Prime Implicants, Quine-McCluskey method Simplification, NAND & NOR Implementations, Two Level Implementations.   |   |             |
| At the end of the Module 2, students will be able to:   |   |             |
| <ol style="list-style-type: none"> <li>Apply basic laws and De Morgan's theorems to simplify Boolean expressions(BL-3)</li> <li>Explain map and Q-M method to minimize Boolean expressions. (BL-2)</li> <li>Implement Boolean expression using universal gates. (BL-3)</li> <li>Implement Boolean expression using two level methods. (BL-3)</li> </ol>                     |   |             |
| <b>MODULE-3</b>   | <b>COMBINATIONAL CIRCUITS</b>               | <b>9 h</b>  |

Introduction, Design Procedure, Adders, Sub tractor, Binary Adder-Sub tractor, BCD Adder, Binary Multiplier, Magnitude Comparator, Multiplexers, De-multiplexers, Decoders, Encoders and Code Converters.

At the end of the Module 3, students will be able to:

1. Design combinational logic circuits. (BL-3)
2. Implement Boolean expression using multiplexer. (BL-3)
3. Implement higher order MUX using lower order MUX.(BL-3)
4. Design code converters using gates. (BL-3)

|                 |                            |             |
|-----------------|----------------------------|-------------|
| <b>MODULE-4</b> | <b>SEQUENTIAL CIRCUITS</b> | <b>10 h</b> |
|-----------------|----------------------------|-------------|

Introduction, Latches, Flip-flops, Master-slave flip flops, Edge-triggered flip-flops, Flip-Flop conversions, Design of Synchronous Sequential Circuits: State Equations, State Table, State reduction, State assignment, State diagram , Mealy and Moore machine models, Registers, Shift Registers, Counters: Synchronous counters, Asynchronous counters & other counters.

At the end of the Module 4, students will be able to:

1. Describe behavior of latches & flip flops. (BL-2)
2. Analyze the flip-flop conversions(BL-3)
3. Analyze synchronous sequential circuits. (BL-3)
4. Explain the design procedure of sequential circuits(BL-2)
5. Design synchronous sequential circuits using state reduction & assignment process. (BL-3)

|                 |   |            |
|-----------------|---|------------|
| <b>MODULE-5</b> | <b>MEMORY &amp;PROGRAMMABLE LOGIC DEVICES</b> | <b>9 h</b> |
|-----------------|---|------------|

Introduction, Random Access Memory, Types of RAM, Memory decoding, Read Only Memory, Types of ROM, Flash memory, Programmable Logic Devices (PLDs): Basic concepts, Programmable Read Only Memory (PROM), Programmable Array Logic (PAL) and Programmable Logic Array(PLA).

At the end of the Module 6, students will be able to:

1. Explain PROM, PAL and PLA. (BL-2)
2. Compare digital logic families. (BL-2)
3. Illustrate the characteristics of digital IC's . (BL-2)

|                     |                 |
|---------------------|-----------------|
| <b>Total hours:</b> | <b>48 hours</b> |
|---------------------|-----------------|

| COURSE CONTENT   |                       |      |
|--|-----------------------|------|
| MODULE – 1   | RESONANCE             | 9hrs |
| Introduction, Definition of quality factor $Q$ of inductor and capacitor, Series resonance, Bandwidth of the series resonant circuits, Parallel resonance (or anti-resonance), Locus diagram for Series R-L, R-C, R-L-C and Parallel Combination with Variation of Parameters. |                       |      |
| At the end of the Module 1, students will be able to:  |                       |      |
| <ol style="list-style-type: none"> <li>Explain the series and parallel resonance.(BL-2)</li> <li>Understand the effect of resonance on series and parallel resonance circuits.(BL-2)</li> <li>Understand the concept of locus diagrams. (BL-2)</li> </ol>                      |                       |      |
| MODULE -2  | DC TRANSIENT ANALYSIS | 9hrs |

|   |  |                              |
|---|--|------------------------------|
| Transient Response of R-L, R-C, R-L-C Series and Parallel Circuits for D.C Excitation-Initial Conditions-Solution Method Using Differential Equations and Laplace Transforms, Response of R-L & R-C Networks to Pulse Excitation.   |  |                              |
| At the end of the Module 3, students will be able to:   |  |                              |
| <ol style="list-style-type: none"> <li>1. Explain the transient phenomenon in DC excitations. (BL-2)</li> <li>2. Explain Application of Laplace transform for solution of D.C transient circuits. (BL-2)</li> <li>3. Compare the classical method and Laplace transform approach in sinusoidal excitations. (BL-2)</li> </ol> |  |                              |
| <b>MODULE -3</b>  | <b>AC TRANSIENT ANALYSIS</b>           | <b>9hrs</b>                  |
| Transient Response of R-L, R-C, R-L-C Series and Parallel Circuits for Sinusoidal Excitations-Initial Conditions-Solution Method Using Differential Equations and Laplace Transforms.   |  |                              |
| At the end of the Module 4, students will be able to:   |  |                              |
| <ol style="list-style-type: none"> <li>1. Explain the transient phenomenon in AC excitations. (BL-2)</li> <li>2. Understand AC transient analysis in electrical circuits to know the power system stability. (BL-2)</li> <li>3. Develop knowledge on R-L, R-C and R-L-C circuit analysis in A.C. (BL-3)</li> </ol>            |  |                              |
| <b>MODULE -4</b>  | <b>TWO PORT NETWORKS</b>               | <b>9Hrs</b>                  |
| Two Port Network Parameters: Impedance, Admittance, Transmission and Hybrid Parameters and their Relations, Reciprocity and Symmetry conditions, Concept of Transformed Network, Two Port Network Parameters Using Transformed Variables.   |  |                              |
| At the end of the Module 5, students will be able to:   |  |                              |
| <ol style="list-style-type: none"> <li>1. Understand the concept of two port network theory. (BL-2)</li> <li>2. Verify the Reciprocity and Symmetry conditions for the given two port network. (BL-1)</li> <li>3. Understand the concept of Transformed Network (BL-2)</li> </ol>   |  |                              |
| <b>MODULE-5</b>   | <b>FILTERS &amp; NETWORK FUNCTIONS</b> | <b>9HRS</b>                  |
| Filters – Low Pass – High Pass and Band Pass – RC, RL filters– derived filters and composite filters design – Attenuators – Network functions for one port and two port networks, pole-zeros of network functions and network stability   |  |                              |
| At the end of the Module 6, students will be able to:   |  |                              |
| <ol style="list-style-type: none"> <li>1. Explain the types of filters. (BL-2)</li> <li>2. Explain the parameters for the design of various filters. (BL-2)</li> <li>3. Explain the poles and zeros of a given transfer function. (BL-2)</li> </ol>   |  |                              |
|   |  | <b>Total hours: 45 hours</b> |

| COURSE CONTENT |                                     |       |
|----------------|-------------------------------------|-------|
| MODULE – 1     | INTRODUCTION TO SIGNALS AND SYSTEMS | 9 Hrs |

**SIGNALS AND SYSTEMS:** Basic definitions and classification of Signals, Basic operations on signals, Classification of Continuous-Time and Discrete-Time Systems, Basic System Properties, Linear Time-Invariant Systems - Discrete-Time LTI Systems, Convolution Sum, Continuous-Time LTI Systems Convolution Integral, Properties of Linear Time-Invariant Systems.

At the end of the Module 1, students will be able to:

1. Understand classifications of the signals and systems. **(BL-2)**
2. Explain continuous and discrete time signals. **(BL-2)**
3. Understand the concept of convolution. **(BL-2)**

|                  |                       |              |
|------------------|-----------------------|--------------|
| <b>MODULE -2</b> | <b>FOURIER SERIES</b> | <b>8 Hrs</b> |
|------------------|-----------------------|--------------|

Representation of Fourier series, Continuous time periodic signals, Dirichlet's conditions, Properties of CT Fourier Series, Trigonometric Fourier Series and Exponential Fourier Series with examples, Complex Fourier spectrum, Fourier series representation of a periodic signals.

At the end of the Module 2, students will be able to:

1. Apply Fourier series for the periodic signals. **(BL-3)**
2. Solve problems by using Fourier series properties. **(BL-3)**
3. Sketch the complex Fourier spectrum. **(BL-3)**

|                 |                           |               |
|-----------------|---------------------------|---------------|
| <b>MODULE-3</b> | <b>FOURIER TRANSFORMS</b> | <b>10 Hrs</b> |
|-----------------|---------------------------|---------------|

Deriving Fourier Transform from Fourier series, Fourier Transform of standard signals, Fourier Transform of Periodic Signals, Properties of CT Fourier Transform, Systems characterized by Linear constant coefficient differential equations. The Magnitude-Phase Representation of the Fourier Transform, The Magnitude-Phase Representation of the Frequency Response of LTI Systems. Definition, Computation and properties of DTFT for different types of signals and systems.

At the end of the Module 3, students will be able to:

1. Analyze the periodic and aperiodic signals by applying Fourier transforms. **(BL-4)**
2. Interpret the Magnitude-Phase Representation of F.T & LTI Systems. **(BL-2)**
3. Solve problems by using F.T properties. **(BL-3)**
4. Analyze the spectral characteristics of signals using Fourier transform. **(BL-4)**
5. Analyze of DTFT for different types of signals and systems. **(BL-4)**

|                 |                 |              |
|-----------------|-----------------|--------------|
| <b>MODULE-4</b> | <b>SAMPLING</b> | <b>7 Hrs</b> |
|-----------------|-----------------|--------------|

Representation of a Continuous Time Signal by its Samples - Sampling Theorem, Reconstruction of a Signal from its Samples Using Interpolation, types of sampling-natural sampling, flat-top sampling and impulse sampling, Effect of under sampling -Aliasing.

At the end of the Module 4, students will be able to:

1. Illustrate the representation of a Continuous Time Signal by sampling. **(BL-2)**
2. Understand the reconstruction of a sampled signal using Interpolation. **(BL-2)**
3. Compare different sampling techniques. **(BL-2)**
4. Solve problems for nyquist interval and nyquist rate. **(BL-3)**

|                 |  |               |
|-----------------|--|---------------|
| <b>MODULE-5</b> | <b>LAPLACE TRANSFORMS &amp; Z-TRANSFORMS</b> | <b>14 Hrs</b> |
|-----------------|--|---------------|

Definition, Region of Convergence, Properties, Inverse Laplace Transform, Relationship between Fourier and Laplace Transforms, Laplace Transform Pairs, Analysis and Characterization of LTI Systems Using the Laplace Transform .

Definition, Region of Convergence, Properties of the z-Transform, Inverse z-Transform, Relation between Fourier and Z Transforms, Common z- Transform Pairs, Analysis and Characterization of LTI Systems Using z-Transforms.

At the end of the Module 4, students will be able to:

1. Understand the properties of Laplace transform. **(BL-2)**
2. Analyze the continuous-time and discrete-time signals and systems using Laplace transform. **(BL-4)**
3. Interpret the relationship between Fourier and Laplace Transforms. **(BL-2)**
4. Find the stability of the systems using ROC. **(BL-1)**

|   |
|---|
| 5. Understand the properties of Z - transform. <b>(BL-02)</b>                         |
| 6. Analyze the discrete-time signals and systems using Z - transforms. <b>(BL-04)</b> |
| 7. Interpret the relationship between Fourier and Z - Transforms. <b>(BL-02)</b>      |
| 8. Find the stability of the systems using ROC. <b>(BL-01)</b>                        |
| <b>Total hours: 48 Hours</b>  |

|--|------|
| <b>Task-1: PN Junction Diode</b>   |      |
| <b>Objective:</b> To Verify the Volt- Ampere characteristics of a PN junction diode and find static, dynamic and reverse resistances of the diode from the graphs.   | CO1  |
| <b>Task-2: ZENER DIODE</b>   |      |
| <b>Objective:</b> To design a Zener diode based voltage regulator against variations of supply and load.   | CO 2 |
| <b>Task-3: Half Wave Rectifier</b>   |      |
| <b>Objective:</b> To design a half wave rectifier for the given specifications with and without filters and verify experimentally and draw suitable graphs.  | CO 3 |
| <b>Task-4: FULL WAVE RECTIFIER</b>   |      |
| <b>Objective:</b> To design a full wave rectifier for the given specifications with and without filters, and verify the given specifications experimentally. Vary the load and find ripple factor. And draw suitable graphs. | CO 3 |
| <b>Task-5: COMMON EMITTER CONFIGURATION</b>  |      |
| <b>Objective:</b> To Verify the input and output characteristics of BJT in Common Emitter configuration experimentally and find the required h – parameters from the graphs  | CO 3 |
| <b>Task-6: Common Emitter Configuration</b>  |      |
| <b>Objective:</b> To Verify the input and output characteristics of BJT Common Emitter configuration experimentally and find h – parameters from the graph   | CO3  |

|  |  |      |
|--|--|------|
| <b>Task-7: Common Collector configuration</b>  |  |      |
| <b>Objective:</b> To Verify the input and output characteristics of BJT Common Collector configuration experimentally and find h – parameters from the graph |  | CO3  |
| <b>Task-8: MOSFET Characteristics</b>  |  |      |
| <b>Objective:</b> To Study and draw the Volt Ampere characteristics of MOSFET  |  | CO 4 |
| <b>Task-9: MOSFET As Switch</b>  |  |      |
| <b>Objective:</b> To Study the Switching characteristics.  |  | CO 4 |
| <b>Task-10:LED Characteristics</b>   |  | CO4  |
| <b>Objective:</b> To Study the characteristics of LED  |  |      |

|  |  |      |
|--|--|------|
| <b>Additional Experiments</b>  |  |      |
| <b>Task-11: VOLTAGE- DIVIDER BIAS CIRCUIT USING BJT.</b>   |  |      |
| <b>Objective:</b> To Design and analyse the voltage- divider bias/self bias circuit using BJT                  |  | CO 1 |
| <b>Task-12: CLIPPERS AND CLAMPER CIRCUITS</b>  |  |      |
| <b>Objective:</b> To Verify clipping and clamper circuits using PN junction diode and draw the suitable graphs |  | CO 1 |

|---|--|--|--|--|--|--|-----------|--|
| <b>TASK-1</b>   |  |  |  |  |  |  | <b>3H</b> |  |
| 1. Write a Program to Implement the following Searching Algorithms:<br>a) Linear Search    b) Binary Search   |  |  |  |  |  |  |           |  |
| <b>TASK- 2</b>  |  |  |  |  |  |  | <b>6H</b> |  |
| 1. Implement the following using arrays:<br>A. Write a Program to Implement Stack Operations<br>B. Write a Program to convert a given infix expression into its Postfix using stack.<br>2. Write a Program to evaluate the Postfix Expression using stack |  |  |  |  |  |  |           |  |
| <b>TASK-3</b>   |  |  |  |  |  |  | <b>3H</b> |  |
| 1. Write a Program to Implement Queue Operations using Arrays<br>2. Write a Program to Implement Circular Queue Operations using Arrays   |  |  |  |  |  |  |           |  |
| <b>TASK-4</b>   |  |  |  |  |  |  | <b>6H</b> |  |
| 1. Write a Program to implement the operations of Singly Linked List<br>2. Write a Program to implement the operations of Doubly Linked List  |  |  |  |  |  |  |           |  |
| <b>TASK-5</b>   |  |  |  |  |  |  | <b>6H</b> |  |
| 1. Write a Program to implement stack operations using linked list<br>2. Write a Program to implement the operations of Circular Singly Linked List   |  |  |  |  |  |  |           |  |
| <b>TASK-6</b>   |  |  |  |  |  |  | <b>3H</b> |  |
| 1. Write a Program to Sort the set of elements:<br>a) Insertion Sort    b) Quick Sort   |  |  |  |  |  |  |           |  |
| <b>TASK-7</b>   |  |  |  |  |  |  | <b>3H</b> |  |
| 1. Write a Program to Sort the set of elements:<br>a) Merge Sort      b) Heap Sort  |  |  |  |  |  |  |           |  |
| <b>TASK-8</b>   |  |  |  |  |  |  | <b>6H</b> |  |
| 1. Write a Program to implement the following on trees<br>a) Insertion and deletion operations<br>b) Traversals   |  |  |  |  |  |  |           |  |

|  |  |                 |
|--|--|-----------------|
| 2. Write a Program to implement Binary Search Tree Operations.   |  |                 |
| <b>TASK-9</b>  |  | <b>6H</b>       |
| 1. Write a Program to implement the following Graph Traversal Algorithms:<br>a) Depth first traversal b) Breadth first traversal |  |                 |
| <b>TASK-10</b>   |  | <b>6H</b>       |
| 1. Write a Program to implement the following Minimum Spanning Tree Algorithms:<br>a) Kruskal's Algorithm b) Prim's Algorithm    |  |                 |
| <b>Additional Experiments:</b>   |  |                 |
| 1. Write Program to Implement Fibonacci Search   |  |                 |
| 2. Write a Program to Implement Double Ended Queue Operations by using Array   |  |                 |
| 3. Write a Program to Implement Tree traversal Techniques  |  |                 |
| 4. Write a Program to Implement Radix Sort   |  |                 |
|  |  | <b>48 hours</b> |

| <b>CO5</b>  | 1  | 1    |      |           |        |           |      |      |       |       |       |       | 3     | 3     |
| 1- Low, 2-Medium, 3- High   |  |      |      |           |        |           |      |      |       |       |       |       |       |       |

| COURSE CONTENT  |  |              |
|---|--|--------------|
| <b>MODULE – 1</b>   | <b>INTRODUCTION TO CONTROL SYSTEMS</b> | <b>9 hrs</b> |
| <p>Examples &amp; Classification of control systems, merits and demerits of Open Loop and closed loop control systems, Effects of positive and negative feedback</p> <p>Mathematical modelling and transfer function of Electrical and Mechanical systems, Analogous systems.</p> <p>Control System Components: DC Servo motor, AC Servo motor , Synchro Transmitter &amp; Receiver (2h)</p> <p>Block diagrams: Block diagram representation of control systems, Block Diagram Reduction Rules .(4h)</p> <p>Signal flow graph: Definitions, Reduction using Mason's gain formula.(3h)</p> |  |              |
| <p>At the end of the Module 1, students will be able to:</p> <ol style="list-style-type: none"> <li>Identify the difference between open loop and closed loop systems <b>(BL=3)</b></li> <li>Understand the effect of feedback on system performance <b>(BL=2)</b></li> <li>Apply the block diagram reduction to simplify the given system <b>(BL=3)</b></li> </ol>   |  |              |
| <b>MODULE-2</b>   | <b>TIME RESPONSE ANALYSIS</b>          | <b>10hrs</b> |
| <p>Standard test signals, Time response of first order and second order un damped, under damped, critically damped and over damped systems, Time domain specifications. (6h)</p> <p>Error Analysis: Steady state Error, static error coefficient of type 0,1, 2 systems (3h)</p>  |  |              |

|   |                                    |                 |
|---|------------------------------------|-----------------|
| At the end of the Module 3, students will be able to:   |                                    |                 |
| <ol style="list-style-type: none"> <li>1. Understand the importance of basic test signals . <b>(BL=2)</b></li> <li>2. Understand the Time response of second order system with different dampings . <b>(BL=2)</b></li> <li>3. Find steady state error for the given system for any input signal. . <b>(BL=1)</b></li> </ol>   |                                    |                 |
| <b>MODULE-3</b>   | <b>STABILITY ANALYSIS</b>          | <b>10 hrs</b>   |
| <p><b>Stability:</b> The concept of stability, Routh's stability criterion, limitations of Routh's stability.(4h)<br/> <b>Root locus plot:</b> The root locus concept, construction of root loci, effects of adding poles and zeros to G(s)H(s) on the root loci. (5h)</p>  |                                    |                 |
| At the end of the Module 4, students will be able to:   |                                    |                 |
| <ol style="list-style-type: none"> <li>1. Understand various stability issues <b>(BL=2)</b></li> <li>2. Apply Routh's stability criteria to given system for stability assessment <b>(BL=3)</b></li> <li>3. construct the Root locus plot for the given system <b>(BL=3)</b></li> </ol>   |                                    |                 |
| <b>MODULE-4</b>   | <b>FREQUENCY RESPONSE ANALYSIS</b> | <b>10 hrs</b>   |
| <p>Introduction, Frequency domain specifications, Bode plot, polar plot, Transfer function from the Bode Diagram, Stability Analysis from Bode Plots. Polar Plots, Nyquist Plots. (8h)<br/> <b>Compensation Techniques:</b> Lag, Lead, Lag-Lead Compensators.(3h)</p>   |                                    |                 |
| At the end of the Module 5, students will be able to:   |                                    |                 |
| <ol style="list-style-type: none"> <li>1. Understand various frequency domain specifications. <b>(BL=2)</b></li> <li>2. Explain the Bode plot for the given system. <b>(BL=2)</b></li> <li>3. Find the stability of given system from Bode plot and polar plot. <b>(BL=1)</b></li> </ol>  |                                    |                 |
| <b>MODULE-5</b>   | <b>STATE SPACE ANALYSIS</b>        | <b>9 hrs</b>    |
| <p><b>Introduction:</b> Concepts of state, state variables and state model, derivation of state models from differential equations, Diagonalization. (5h)<br/> <b>Solution of state equation:</b> Solving the Time invariant state Equations, State Transition Matrix and it's Properties. (2h)<br/> <b>The concepts of controllability and observability.</b> (2h)</p> |                                    |                 |
| At the end of the Module 6, students will be able to:   |                                    |                 |
| <ol style="list-style-type: none"> <li>1. Understand the importance of state space analysis <b>(BL=2)</b></li> <li>2. Find the state model for the given transfer function through various techniques. <b>(BL=1)</b></li> <li>3. Examine the controllability and observability of the given state model. <b>(BL=1)</b></li> </ol>                                       |                                    |                 |
| <b>Total hours:</b>   |                                    | <b>48 hours</b> |

| COURSE CONTENT  |                |        |
|---|----------------|--------|
| MODULE – 1  | Electrostatics | 13 Hrs |
| Coulomb's Law, Electric Field Intensity – Fields due to Different Charge Distributions, Electric Flux Density, Gauss Law and Applications, Electric Potential, Relations Between E and V, Maxwell's Two Equations for Electrostatic Fields, Electric dipole, Energy Density, Convection and Conduction Currents, Dielectric Constant, Isotropic and Homogeneous Dielectrics, Continuity Equation, Relaxation Time, Poisson's and Laplace's Equations, Capacitance – Parallel Plate, Coaxial, Spherical Capacitors, Illustrative Problems. |                |        |
| At the end of the Module 1, students will be able to:   |                |        |
| <ol style="list-style-type: none"> <li>Summarize basic laws of static electric field. (BL-2)</li> <li>Derive the Maxwell's equations for electrostatic fields. (BL-3)</li> <li>Solve problems applying laws of electrostatics. (BL-3)</li> <li>Explain electric energy and potential (BL-2)</li> <li>Define currents of conductors and dielectrics (BL-1)</li> <li>Illustrate Poisson's and Laplace's Equations (BL-2)</li> <li>Summarize types of capacitors (BL-2)</li> </ol>   |                |        |

| <b>MODULE -2</b>  | <b>Magneto statics</b>                             | <b>9 Hrs</b>    |
|---|--|-----------------|
| Biot-Savart's Law, Ampere's Circuital Law and Applications, Magnetic Flux Density, Maxwell's Two Equations for Magneto static Fields, Magnetic Scalar and Vector Potentials, Forces due to Magnetic Fields, Magnetic torque and moment, Magnetic dipole, Inductances and Magnetic Energy, Illustrative Problems.  |  |                 |
| At the end of the Module 2, students will be able to:   |  |                 |
| <ol style="list-style-type: none"> <li>1. Summarize basic laws of static magnetic field. (BL-2)</li> <li>2. Derive the Maxwell's equations for magnetic fields. (BL-3)</li> <li>3. Solve problems applying laws of magneto statics. (BL-3)</li> </ol>   |  |                 |
| <b>MODULE-3</b>   | <b>Maxwell's Equations for Time Varying Fields</b> | <b>6 Hrs</b>    |
| Faraday's Law and Transformer e.m.f, Inconsistency of Ampere's Law and Displacement Current Density, Maxwell's Equations in Different Forms and Word Statements. Boundary Conditions of Electromagnetic fields: Dielectric-Dielectric and Dielectric-Conductor Interfaces, Illustrative Problems.   |  |                 |
| At the end of the Module 3, students will be able to:   |  |                 |
| <ol style="list-style-type: none"> <li>1. Derive Maxwell's equations for time varying electromagnetic fields. (BL-3)</li> <li>2. Apply the boundary conditions of EM fields at the interface of different media.(BL-3)</li> <li>3. Solve problems on time varying maxwell's equations of electromagnetic fields. (BL-3)</li> </ol>  |  |                 |
| <b>MODULE-4</b>   | <b>EM Wave Characteristics</b>                     | <b>12 Hrs</b>   |
| Wave Equations ,Uniform Plane Waves – Definition, All Relations between E & H, Sinusoidal Variations, Wave Propagation in Lossless and Conducting Media, Conductors & Dielectrics – Characterization, Wave Propagation, Polarization, Reflection and Refraction of Plane Waves – Normal and Oblique Incidences, for both Perfect Conductor and Perfect Dielectrics, Brewster Angle, Surface Impedance, Poynting Vector, and Poynting Theorem – Applications, Power Loss in a Plane Conductor, Illustrative Problems.    |  |                 |
| At the end of the Module 4, students will be able to:   |  |                 |
| <ol style="list-style-type: none"> <li>1. Derive wave equations for different media. (BL-3)</li> <li>2. Explain concept of polarization of electromagnetic waves. (BL-2)</li> <li>3. Solve problems using wave characteristics equations (BL-3)</li> <li>4. Explain principles of reflections and refraction for different incidences. (BL-2)</li> <li>5. Explain concept of power flow using Pointing vector. (BL-2)</li> <li>6. Solve problems on Brewster angle, power flow and surface impedance. (BL-3)</li> </ol> |  |                 |
| <b>MODULE-5</b>   | <b>Transmission Lines</b>                          | <b>8 Hrs</b>    |
| Introduction, Transmission line parameters (Primary and Secondary), Transmission line equations, Input impedance, Standing wave ratio & power, Smith chart & its applications, Applications of transmission lines of various lengths, Micro-strip transmission lines – input impedance, Illustrative Problems.  |  |                 |
| At the end of the Module 6, students will be able to:   |  |                 |
| <ol style="list-style-type: none"> <li>1. Study the principles of transmission lines and concept of smith chart.(BL-2)</li> <li>2. Derive the input impedance of transmission line.(BL-3)</li> <li>3. Calculate the line parameters through problem solving.(BL-3)</li> <li>4. Study the applications of different lengths of transmission lines.(BL-2)</li> </ol>  |  |                 |
| <b>Total Hours:</b>   |  | <b>48 Hours</b> |

**Pre-requisite:** Basic knowledge on concepts of electronic devices.

**Course Objectives:**

1. To study the effect of negative feedback on amplifier characteristics.
2. To design RC & LC oscillator circuits.
3. To analyze amplifier frequency response at low and high frequencies.
4. To study coupling schemes and multi stage amplifiers.
5. To analyze the large signal amplifiers and tuned amplifiers.

**Course Outcomes:** After successful completion of the course, the student will be able to:

|             |  |
|-------------|--|
| <b>CO 1</b> | Analyze small signal amplifiers at low frequencies and high frequencies.(BL-4) |
| <b>CO 2</b> | Understand the concept of different negative feedback amplifiers. (BL-2)       |
| <b>CO 3</b> | Understand the working principle of RC & LC oscillators. (BL-2)                |
| <b>CO 4</b> | Analyze various configurations of multistage amplifiers. (BL-4)                |
| <b>CO 5</b> | Learn operation of Power amplifiers and Tuned amplifiers.(BL-2)                |

| CO-PO Mapping |      |      |      |      |      |      |      |      |      |       |       |       |       |       |

1: Low, 2-Medium, 3- High

| COURSE CONTENT  |   |               |
|---|---|---------------|
| <b>MODULE – 1</b>   | <b>SMALL SIGNAL LOW FREQUENCY &amp; HIGH FREQUENCY ANALYSIS</b> | <b>10 Hrs</b> |
| <p><b>Low Frequency Analysis:</b></p> <p>Transistor hybrid model, determination of h-parameters, conversion of h-parameters, Analysis of CB, CE and CC amplifiers using exact and approximate analysis.</p> <p><b>High Frequency Analysis:</b></p> <p>Hybrid- <math>\pi</math> Common Emitter transistor model, Hybrid <math>\pi</math> conductance's, Hybrid <math>\pi</math> capacitances, Validity of hybrid <math>\pi</math> model, determination of high-frequency parameters in terms of low-frequency parameters, CE short circuit current gain, Current gain with resistive load.</p> <p>At the end of the Module 1, students will be able to:</p> <ol style="list-style-type: none"> <li>1. Define Transistor hybrid model.(BL-1)</li> <li>2. Compare different transistor amplifiers. (BL-2)</li> <li>3. Explain the effect of coupling and emitter bypass capacitors. (BL-2)</li> <li>4. Explain the gain bandwidth product of amplifiers.(BL-2)</li> <li>5. Analyze the Emitter follower frequency response at high frequencies.(BL-4)</li> <li>6. Analyze the hybrid <math>\pi</math> CE transistor model. (BL-4)</li> </ol> |   |               |

| <b>MODULE -2</b>  | <b>FEEDBACK AMPLIFIERS</b>                     | <b>10 Hrs</b>   |
|---|--|-----------------|
| Feedback concept, types of feedback, classification, feedback topologies, Characteristics of negative feedback amplifiers, Generalized analysis of feedback amplifiers, Determination of input & output impedance of different feedback amplifier, Method of Analysis of Feedback Amplifiers.   |  |                 |
| At the end of the Module 2, students will be able to: <ul style="list-style-type: none"> <li>1. Define negative and positive feedback in amplifiers.(BL-1)</li> <li>2. Explain the effect of negative feedback on amplifier characteristics.(BL-2)</li> <li>3. Compare different feedback topologies. (BL-2)</li> </ul>   |  |                 |
| <b>MODULE-3</b>   | <b>OSCILLATORS</b>                             | <b>9 Hrs</b>    |
| Oscillator principle, condition for oscillations, types of oscillators, Generalized analysis of LC Oscillators, Hartley oscillator & Colpitt's oscillator using BJT and FET with relevant analysis, Crystal oscillators, RC-phase shift oscillator & Wein bridge oscillator using BJT with relevant analysis, Frequency & amplitude stability of oscillators.   |  |                 |
| At the end of the Module 3, students will be able to: <ul style="list-style-type: none"> <li>1. Explain condition for oscillations and types of oscillators.(BL-2)</li> <li>2. Illustrate the operation of RC oscillators.(BL-2)</li> <li>3. Explain the operation of LC oscillators.(BL-2)</li> <li>4. Demonstrate the frequency and amplitude stability of oscillators(BL-2)</li> </ul>   |  |                 |
| <b>MODULE-4</b>   | <b>MULTISTAGE AMPLIFIERS</b>                   | <b>10 Hrs</b>   |
| Classification of amplifiers, Methods of coupling, Generalized analysis of Cascaded amplifier, Analysis of two stage RC coupled amplifier with frequency response, Cascode amplifier, Emitter follower , Darlington pair amplifier, Differential amplifier using BJT.   |  |                 |
| At the end of the Module 4, students will be able to: <ul style="list-style-type: none"> <li>1. Explain the concept of cascading and coupling schemes(BL-2)</li> <li>2. Analyze two stage RC coupled amplifier (BL-4)</li> <li>3. Summarize the darlington amplifier parameters.(BL-2)</li> <li>1. Explain differential amplifier with BJT. (BL-2)</li> </ul>   |  |                 |
| <b>MODULE-5</b>   | <b>POWER AMPLIFIERS &amp; TUNED AMPLIFIERS</b> | <b>9 Hrs</b>    |
| Power Amplifiers: Classification, Class A Power Amplifier, Distortion, Second harmonic Distortion, Class B Amplifier, Push- pull amplifier, Complementary Symmetry Class AB Amplifier, Class C Amplifier, Thermal stability and Heat sink.  |  |                 |
| Tuned Amplifiers: Tuned Circuit, Q-Factor, Single tuned capacitive coupled amplifier, Effect of Cascading Single tuned amplifiers on Band width, Stability.   |  |                 |
| At the end of the Module 5, students will be able to: <ul style="list-style-type: none"> <li>1. List types of power amplifiers &amp; compare the voltage and power amplifier.(BL-2)</li> <li>2. Discuss heat sinks, thermal stability and distortions.(BL-1)</li> <li>3. Explain the concept of tuned circuits. (BL-02)</li> <li>4. Compare different tuned amplifiers. (BL-02)</li> <li>5. Derive the expression for gain and bandwidth of a single tuned amplifier. (BL-02)</li> <li>6. Describe the effect of cascading on bandwidth of tuned amplifiers. (BL-02)</li> </ul> |  |                 |
| <b>Total hours:</b>   |  | <b>48 Hours</b> |

| 1: Low, 2-Medium, 3- High |      |      |      |      |      |      |      |      |      |       |       |       |      |       |

| COURSE CONTENT   |                    |              |
|--|--------------------|--------------|
| <b>MODULE – 1</b>  | <b>PROBABILITY</b> | <b>9 Hrs</b> |
| Probability introduced through Sets and Relative Frequency; Probability space& Axioms; Mathematical Model of Experiments, Joint probability, Conditional probability, Total probability and Baye's theorem |                    |              |

|  |  |               |
|--|--|---------------|
| At the end of the Module 1, students will be able to:  |  |               |
| <ol style="list-style-type: none"> <li>1. Understand the fundamental concepts of probability (BL-2)</li> <li>2. Find the probability for real time examples (BL-1)</li> <li>3. Find total probability (BL-1)</li> <li>4. Apply Baye's theorem for different real time applications (BL-3)</li> </ol>   |  |               |
| <b>MODULE -2</b>   | <b>DISCRETE&amp; CONTINUOUS RANDOM VARIABLES</b>                                 | <b>9 Hrs</b>  |
| Probability mass function, probability distribution function, example random variables and distributions and density functions; Joint distributions, functions of one and two random variables, moments of random variables; Conditional distribution, densities and moments; Characteristic functions of a random Variables; Central limit theorem (without+ proof)   |  |               |
| At the end of the Module 2, students will be able to:  |  |               |
| <ol style="list-style-type: none"> <li>1. Understand probability distribution and density functions (BL-2)</li> <li>2. Outline the importance of the central limit theorem (BL-2)</li> <li>3. Solve the moments to the sum of random variables (BL-3)</li> <li>4. Apply different probability distribution and density functions on random variables.(BL-3)</li> </ol>   |  |               |
| <b>MODULE-3</b>  | <b>OPERATIONS ON MULTIPLE RANDOM VARIABLES</b>                                   | <b>9 Hrs</b>  |
| Expected value of a function of random variables, joint moments about the origin, joint central moments Transformations of Multiple Random Variables, Linear Transformations of Gaussian Random Variables. Markov, Chebyshev and Chernoff bounds.  |  |               |
| At the end of the Module 3, students will be able to:  |  |               |
| <ol style="list-style-type: none"> <li>1. Understand the moments for multiple random variables. (BL-2)</li> <li>2. Understand the concepts of linear transformation of Gaussian random variables. (BL-2)</li> <li>3. Apply the different operations to multiple random variables. (BL-3)</li> </ol>  |  |               |
| <b>MODULE-4</b>  | <b>RANDOM PROCESSES: TEMPORAL CHARACTERISTICS &amp; SPECTRAL CHARACTERISTICS</b> | <b>12 Hrs</b> |
| The random process concept, classification of processes, concept of stationary and statistical independence. Correlation function.   |  |               |
| Power spectrum Properties, Relationship between power spectrum and autocorrelation function, properties of power spectral density, relation between cross – power density spectrum and cross correlation, properties of cross power spectral density; problems.  |  |               |
| At the end of the Module 4, students will be able to:  |  |               |
| <ol style="list-style-type: none"> <li>1. Define continuous and discrete-time random processes. (BL-1)</li> <li>2. Explain various Stationary Processes. (BL-2)</li> <li>3. Apply the concepts and its properties of auto correlation. (BL-3)</li> <li>4. Apply the concepts and its properties cross correlation functions. (BL-3)</li> <li>5. Understand the concepts of power spectral density &amp; cross power spectral density (BL-2)</li> <li>6. Apply PSD &amp; CPSD properties on random process. (BL-3)</li> <li>7. Apply CPSD properties on random process. (BL-3)</li> </ol> |  |               |
| <b>MODULE-5</b>  | <b>RANDOM SIGNAL RESPONSE OF LINEAR SYSTEMS</b>                                  | <b>9 Hrs</b>  |
| System Response – Convolution, Mean and Mean squared Value of System Response, autocorrelation Function of Response, Cross Correlation Functions of Input and Output, Spectral Characteristics of System Response: Power Density Spectrum of Response, Cross-Power Density Spectrums of Input and Output, Band pass, Band Limited and Narrowband Processes, Properties.  |  |               |
| <b>Noise Definitions:</b> White Noise, Ideal low passfiltered white noise, RC filtered white noise.  |  |               |

At the end of the Module 6, students will be able to:

1. Relate the theory of stochastic processes to analyze linear systems. (BL-2)
2. Understand the concepts of low pass and band pass noise models for random processes. (BL-2)
3. Apply the statistical characteristics to response of linear systems. (BL-3)
4. Analyse the output characteristics of a system when input is an WSS process. (BL-4)

|                     |                 |

| COURSE CONTENT  | CO   |
|---|------|
| <b>Task-1 : COMMON EMITTER AMPLIFIER</b>  |      |
| <b>Objective:</b> Design voltage divider based Common Emitter amplifier with discrete components and calculate the bandwidth of amplifier from its frequency response.                      | CO1  |
| <b>Task-2: RC COUPLED AMPLIFIER</b>   |      |
| <b>Objective:</b> Design two stage RC coupled amplifier for given specifications. Determine Gain and Bandwidth from its frequency response curve.   | CO 1 |
| <b>Task-3: DARLINGTON AMPLIFIER</b>   |      |
| <b>Objective:</b> Design Darlington amplifier and determine gain and bandwidth from frequency response.   | CO 2 |
| <b>Task-4: CASCODE AMPLIFIER</b>  |      |
| <b>Objective:</b> Design cascode amplifier and determine gain and bandwidth from frequency response   |      |
| <b>Task-5: VOLTAGE SERIES FEEDBACK AMPLIFIER</b>  |      |
| <b>Objective:</b> Design voltage series feedback amplifier for the given specifications. Determine the effect of feedback on the frequency response of a voltage series feedback amplifier. | CO 2 |
| <b>Task-6 : CURRENT SHUNT FEEDBACK AMPLIFIER</b>  |      |

|   |      |
|---|------|
| <b>Objective:</b> Design and simulate current shunt feedback using PSPICE/Multisim and determine the effect of feedback on the frequency response                                 | CO 2 |
| <b>Task-9: RC PHASE SHIFT OSCILLATOR</b>  |      |
| <b>Objective:</b> Design and simulate RC Phase shift oscillator for the given specification using PSPICE /Multisim. Determine the frequency of oscillation using simulation tool. | CO 2 |
| <b>Task-10 : HARTLEY OSCILLATOR</b>   |      |
| <b>Objective:</b> Design and simulate Hartley oscillator using PSPICE /Multisim and determine the frequency of oscillations..   | CO 2 |
| <b>Task-9: COLPITTS OSCILLATOR</b>  |      |
| <b>Objective:</b> Design and simulate Colpitts oscillator using PSPICE /Multisim and determine the frequency of oscillations.   | CO 4 |
| <b>Task-11: CLASS-A POWER AMPLIFIER</b>   |      |
| <b>Objective:</b> Design and simulate class A power amplifier using PSPICE /Multisim, find out the efficiency and Plot the output waveforms.                                      | CO 4 |
| <b>Task-12: CLASS-B PUSH PULL AMPLIFIER</b>   |      |
| <b>Objective:</b> Design and simulate class B push-pull amplifier using PSPICE /Multisim, find out the efficiency and Plot the output waveforms.                                  | CO 2 |
| <b>Task-12: SINGLE TUNED AMPLIFIER</b>  |      |
| <b>Objective:</b> Design and simulate single tuned voltage amplifier using PSPICE /Multisim and determine the resonant frequency and bandwidth.                                   | CO 2 |

1: Low, 2-Medium, 3- High

| COURSE CONTENT   | CO          |
|--|-------------|
| <b>Task-1: INTRODUCTION TO MATLAB</b>  |             |
| <b>Objective:</b> To familiarize MATLAB Tool.  | <b>CO1</b>  |
| <b>Task-2: OPERATIONS ON MATRICES</b>  |             |
| <b>Objective:</b> To write a MATLAB program to perform various mathematical operations on matrices. <ol style="list-style-type: none"> <li>Addition of two <math>N \times N</math> matrices</li> <li>Subtraction of two <math>N \times N</math> matrices</li> <li>Multiplication of two <math>N \times N</math> matrices</li> <li>Inverse of a matrix</li> <li>Eigen values of a matrix</li> </ol> | <b>CO 1</b> |
| <b>Task-3: GENERATION OF SIGNALS AND SEQUENCES</b>   |             |
| <b>Objective:</b> To write a MATLAB program to generate various signals and Sequences such as unit Impulse, Unit Step, Square, Sawtooth, Triangular, Sinusoidal, Ramp, sinc function.  | <b>CO 1</b> |
| <b>Task-4: OPERATIONS ON SIGNALS AND SEQUENCES</b>   |             |

|   |      |
|---|------|
| <b>Objective:</b> To write a MATLAB program to perform various operations on signals and sequences such as<br>A. Addition<br>B. Multiplication<br>C. Scaling<br>D. Shifting<br>E. Folding | CO 2 |
| <b>Task-5: ENERGY AND POWER OF A SIGNAL</b>   |      |
| <b>Objective:</b> To write a MATLAB program to find Energy and power of a given signal.   | CO 1 |
| <b>Task-6: CONVOLUTION AND CORRELATION OF SIGNALS AND SEQUENCES</b>   |      |
| <b>Objective:</b> To write a MATLAB program to perform convolution and correlation of given signals and sequences using MATLAB.   | CO 1 |
| <b>Task-7: FOURIER TRANSFORM OF A SIGNAL</b>  |      |
| <b>Objective:</b> To write a MATLAB program to find the Fourier Transform of a Signal and plot its Magnitude and Phase Spectrum.  | CO 3 |
| <b>Task-8: VERIFICATION OF LINEARITY AND TIME INVARIANCE PROPERTIES</b>   |      |
| <b>Objective:</b> To write a MATLAB program to verify Linearity and Time Invariance properties of Continuous/Discrete Systems.  | CO 4 |
| <b>Task-9: LAPLACE TRANSFORM OF CONTINUOUS SIGNAL</b>   |      |
| <b>Objective:</b> To write a MATLAB program to find the Laplace transform of a signal.  | CO 3 |
| <b>Task-10: Z-TRANSFORM OF DISCRETE SIGNAL</b>  |      |
| <b>Objective:</b> To write a MATLAB program to find the Z-transform of a discrete signal.   | CO 3 |
| <b>Task-11: GAUSSIAN NOISE</b>  |      |
| <b>Objective:</b> To write a MATLAB program to generate Complex Gaussian noise and find its mean, variance, Probability Density Function (pdf) and Power Spectral Density (PSD)           | CO 1 |
| <b>Task-12: VERIFICATION OF SAMPLING THEOREM</b>  |      |
| <b>Objective:</b> To write a MATLAB Program to verify Sampling theorem  | CO 4 |

|   |      |
|---|------|
| <b>Additional Experiments:</b>  |      |
| <b>Task-13: LOCATING ZEROS AND POLES</b>  |      |
| <b>Objective:</b> To write a MATLAB program to Locate Zeros and Poles and plot in S-Plane or Z-Plane for the given Transfer Function. | CO 3 |

|   |      |
|---|------|
| <b>Task-14: DETECTION OF NOISE BY CORRELATION</b>                                       |      |
| <b>Objective:</b> To write a MATLAB program to detect Noise by Auto Correlation / Cross | CO 1 |

|              |  |
|--------------|--|
| correlation. |  |
